

BTC HANDBOOK 2024

YOUR ULTIMATE GUIDE TO
PLACEMENTS

FOREWORD

Dear Students and Alums,

We are proud to present the Business Technology Club (BTC) Handbook for the PGP Class of 2024. The Class of 2024 faced significant challenges during the placement season due to various macroeconomic factors. These difficulties have only strengthened our resolve to ensure that the Class of 2025 experiences a smoother journey in securing their dream roles.

Throughout the year, the BTC Core team has worked tirelessly to conduct informative sessions, engage relevant alumni with the cohort, and help students build meaningful product and tech experience for their resumes. Additionally, we have focused on comprehensive interview preparation. This handbook is the culmination of our efforts, encapsulating all the learnings of the Core team in one document.

We hope you utilize this Handbook throughout the year, starting with it as a guide to structuring your placement preparations. The content here serves as a foundational starting point and a means to revise key learnings. We advise you to go beyond the handbook by attending the sessions organized by BTC and learning from each other to delve deeper into each topic covered in the book. Moreover, we have collated the interview experiences of almost every company that recruited for tech and product roles at ISB. These collective insights should help you launch your dream careers and excel in placements.

Please feel free to reach out to us if you need any assistance or advice. The Class of 2024 is committed to helping you achieve your full potential in any way we can. Together, let us strive to make your placement season a successful and rewarding experience.

GUIDE TO PLACEMENT SEASON

A common mistake committed by students is to wait too long before starting preparing for placements. This is entirely avoidable. Although the year at ISB can be intense and challenging, it would be immensely helpful to begin preparation as early as possible. By preparation, we don't mean that you should start practicing mock interviews from the day the course begins. However, there are other activities you can do to get a head start for placement season.

Time to go for placements	Activities to focus on
3-5 months	1. Attending BTC sessions to get an overview of the different kinds of product management roles, assessing the skills needed etc. - This helps you understand the world of Product Management better. - It also helps you pick up on the terminologies and buzzwords that PMs use, to sound more relatable in interviews. - Finally, it helps you connect with alumni, which can be useful later on during placements and in your career 2. Trying out new Apps: In your free time, you can install Apps from different sectors - ecommerce, gaming, productivity, etc and just browse through the features. Ask yourself why does a particular feature exist, how can you improve it, etc. - Helps build product sense - Helps generate ideas for product design questions (helpful later) 3. Listening to PM Podcasts 4. Case Competitions: Needless to say, try to participate in product-related case competitions, especially if you do not have product experience. - Helps build confidence in product management - Helps build good resume pointers - Helps in getting your deck formats ready for placement season. Many companies ask for decks as an assessment criteria.

2-3 months	1. Case competitions (Contd) 2. Resume building a. Download resumes of past batches from KMP to get an idea of how the resume is supposed to be formatted. Create version 1 of the resume in this format, before getting it reviewed by alumni. b. BTC and SEAL will help with alumni mapping. Make the most of this opportunity to get multiple resume reviews. c. You may need to prepare separate resumes for consulting, product, marketing, etc. Make sure you devote enough time to this activity
0-1.5 months	Interview Prep! Form a case group with fellow product enthusiasts, create a time table to devote enough time to tackle each interview question type. Pair up and practice away. Use resources like Exponent, YouTube, BTC Handbook to come up with interview questions.

LEARNING RESOURCES

Books

Must-read:

Will help you understand what a tech/PM interview looks like

- [BTC Handbook](#)
- Decode and Conquer by Lewis C. Lin
- The Product Manager Interview: 164 Actual Questions and Answers by Lewis Lin
- Cracking the PM Interview by Jackie Bavaro

Good to Read: These will help you develop a perspective on real-world product thinking. These books make for good conversation pieces in the interview, but do not contain questions and answers. Good for non-tech folks to get an insight into software or technology. Start reading these books very early in your preparation – read one chapter every day.

- Tech Simplified
- Swipe to Unlock
- Hooked by Nir Eyal

YouTube Channels

- Exponent
- StellarPeers
- PMExercises

- Dianna Yau

Products to Read Up On

This is a list of popular products per industry / domain. It is recommended to do a full product teardown or case study on at least one product per industry before your interview.

Industry	Products
Fintech / Payments	Razorpay, PhonePe, Google Pay, Paytm, WhatsApp Pay
Investments	Groww, Zerodha, Smallcase
Food Delivery	Zomato, Swiggy, Dunzo
Grocery Delivery	Swiggy Instamart, Big Basket, Amazon Fresh, Zepto
Ride Sharing	Uber, Ola
E-Commerce	Amazon, Flipkart, Myntra
Social Media	Instagram, Threads, Facebook, Twitter, Snapchat
SuperApp	WeChat, Paytm
Cloud Computing	Amazon Web Services (AWS), Google Cloud, Microsoft Azure
Over-the-top (OTT)	Netflix, Amazon Prime, Disney+ Hotstar
Messaging / Communication	WhatsApp, Messenger, Telegram, Gmail
Ad-supported Media	YouTube, Spotify, Twitch, Moj
Real-Money Gaming	Dream11, WinZo, Zynga
Analytics	Thoughtspot, Amplitude
Ad Tech	Media.Net, Meta, Google

Twitter/X Accounts to follow

Twitter/X is a great place to follow product leaders and network with product managers. You can start by following some of the following accounts and engaging with them. As you start to tweet your own thoughts and experiences with products, new feature launches of famous products, etc, you can start organically building a network and a 'voice' as a product enthusiast.

Global Leaders

Shreyas Doshi (@shreyas) Product leader and influencer, ex-Stripe, Google, Yahoo. Arguably the most famous product management voice on Twitter.

Hiten Shah (@hnshah): Founder, KISSMetrics

Ryan Hoover (rrhoover): Founder of Product Hunt

Lenny Rachitsky (@lennysan): Author of a highly popular product management newsletter LennysNewsletter, mainly talks about SaaS and subscription models

Teresa Torres (@ttorres): Talks about user research, interview design and product leadership

Indian Leaders

Arindam Paul (arindam___paul): Founder, Atomberg fans. Gives highly practical and insightful tips on marketplaces, growth, marketing.

Deepak Singh (deepak_singh): Author, Tech Simplified and founder of PMCurve, a PM upskilling platform

Hardik Pandya (hpandya): Head of design, Unacademy

Mahesh Suthar (@misterwhistler): Tech recruiter

Mona Gandhi (@monagandhi): Founder, Upraised and founding engineer, Airbnb

RESUME GUIDELINES

You will find previous years' resumes on the KMP portal. It is recommended to go through the resumes which were successfully shortlisted for your target companies and also look at resumes which include work from your previous industries.

Resume Customizations

Look at the job description before you apply to any company. Try to customise your resume to fit the specific JD, such as:

- B2C vs B2B focus
- Tech-focused vs general PM-focused terminology
- Web-apps vs mobile-apps focus

General Guidelines

- In general, “Education” section should be 20% of your resume, “Experience” should be 70%, and “Extracurriculars” should be the remaining 10%
- “Education” should include ISB (along with your intended majors), your POR, any case comp wins while at ISB, your Masters (if applicable) / Bachelor's degree, ELPs, pro-bono work, and any SIGs you have worked on
- “Experience” should only include your full-time work experience, internships are not counted
- “Extracurriculars” should include anything beyond your work or academic settings – this is a great opportunity to connect meaningfully with interviewers, so make it count with activities you're passionate about
- Every point should be in one line; no point should go over one line
- STAR is preferred over RAC. To save line-space, you can just go action-first, result-second

- Any numbers or percentages should be properly benchmarked Ex: “Grew monthly downloads by 10%” → “Grew monthly downloads by 10% (20L to 22L)”
- Use as many product terminologies and metrics as you can Ex: “Reduced time to ship” → “Reduced turnaround time”
- Talk in the language of a PM. Use action words like “prioritised”, “shipped”, “prototyped”, “researched user behaviour”, “managed stakeholders”, etc
- Don’t talk about duties – translate them into wins
- Prepare to be grilled for 30 minutes on every point of your resume in the interview
- Do plenty of alum reviews of your resume.
- Your resume will not be finalised until around 5 - 6 alums have reviewed it
- GPA doesn’t matter for product management, feel free to not disclose it if you don’t want
- Having a POR is of no value until you mention the impact you have created
- Focus on managerial, technological, product performance, and financial wins primarily

Note: [Here](#) is a list of action-verbs you can use for your resume

Getting your resume reviewed -

- Start by getting your resume reviewed by peers. This will remove the obvious errors – like grammatical errors, spelling mistakes, font or margin issues
- Get the resume reviewed by 2 or 3 alums. Don’t change your resume after every review. Get advice from all the alums and then make changes in bulk.
- Remember that even alums might give contradictory advice based on their experience.

CASE COMPETITIONS & PRE-INTERVIEW CASES

Online Resources

1. Flaticon
2. The Noun Project
3. Slides Carnival
4. PowerPoint Templates
5. Balsamiq
6. Canva

Engaging in case competitions and tackling pre-interview cases are essential milestones for aspiring Product Managers. These challenges often constitute a significant portion of the interview process, with approximately 70% of PM roles featuring a case study component. During this phase, candidates are tasked with crafting a compelling presentation deck (typically 7 - 8 slides) or a comprehensive document spanning 1500 - 2000 words.

Key Points to Consider:

- **Pursue Excellence:** A substantial number of candidates are filtered out at this stage, underscoring the importance of delivering top-notch work. Half-hearted efforts may lead to immediate dismissal.
- **First Impressions Count:** Sometimes, your case submission serves as the inaugural interview round, where you're expected to dissect and discuss your submission in-depth.
- **Grasp the Essence of the Problem:** The cornerstone of a pre-interview case submission lies in genuinely understanding the problem statement. Demonstrating a blend of primary and secondary research showcases your comprehension, a step often overlooked by many candidates eager to dive into solution design.
- **Balance Creativity with Practicality:** Successful pre-interview cases necessitate a fusion of creativity and logic. Your solutions should be both imaginative and feasible for implementation by the company. Avoid crafting fantastical solutions

detached from reality; instead, propose solutions grounded in real-world applicability.

- **Structured Approach:** Adhering to a clear structure is paramount.

Consider the following outline as a foundational framework, adaptable to suit the nuances of each case study:

1. Industry/Company Overview
2. Problem Understanding
3. User Segments/User Journey
4. Proposed Solutions
5. Key Metrics
6. Implementation Plan/Go-to-Market Strategy

Strategies for Navigating Pre-Interview Cases:

- **Prepare Your Template:** Develop your template in advance to streamline your workflow, particularly during intense placement periods. Utilizing standardized deck templates can significantly reduce preparation time, allowing for deeper focus on content refinement.
- **Deep Dive into the Problem:** Prioritize grasping the essence of the problem at hand. Collaborating with alumni familiar with the company's challenges can provide invaluable insights, ensuring alignment with real-world scenarios.
- **Strategic Prioritization:** Recognize the importance of prioritization. Channel your efforts into a select few case studies, investing full commitment, rather than spreading thinly across multiple tasks.
- **Foster Collaboration:** Embrace collaboration by supporting your peers tackling case studies within your domain expertise. Cultivating a network of allies fosters mutual growth and enhances collective success.

Embarking on Case Competitions:

- **Skill Enhancement:** Case competitions serve as fertile ground for honing problem-solving and brainstorming skills, pivotal assets in PM interviews.

- CV Enrichment: Participation in case competitions enriches your CV, often serving as a talking point during interviews, potentially earning you additional credibility.
- Incentives and Opportunities: Many competitions offer enticing incentives such as cash prizes, gadgets, or pre-placement interview/offers (PPI/PPO), providing tangible motivations for participation. Selecting Suitable Competitions:
- Optimizing Efforts: Prioritize competitions offering favorable returns, whether through substantial prizes or enhanced chances of securing PPI/PPO opportunities.
- Strategic Choices: Identify competitions with low participation rates, presenting opportunities for swift victories. Additionally, aspire to participate in prestigious competitions, despite the slim odds, for the invaluable learning experiences they offer.

Building Effective Teams:

- Diverse Skill Set: Assemble teams boasting diverse skill sets, encompassing proficient researchers, adept designers, and individuals with specialized industry/domain knowledge.

Approaching Case Study Solutions:

- Thorough Research: Conduct comprehensive research, delving deep into industry intricacies to impress judges with insightful analyses. Leverage connections, such as ISB alumni, for firsthand insights.
- Practical Ideation: Generate a modest number of well-considered ideas, prioritizing practicality over quantity. Validate your concepts rigorously, ensuring viability and relevance to real-world scenarios.
- Presentation Excellence: Craft visually engaging presentations, incorporating infographics and succinct, clear content. Emphasize clarity and coherence during delivery, maintaining composure throughout.

- Strive for Originality: While seeking inspiration from past submissions, prioritize originality to demonstrate genuine learning and initiative. Plagiarism risks disqualification and undermines the integrity of your efforts.

INTERVIEW PREPARATION

This section covers an explainer on how to tackle the most commonly asked question types in product interviews at ISB.

PRODUCT DESIGN

What is product design?

The most important and widely asked type of question, product design questions aim to test your product sense. They evaluate your creativity, ability to empathize with users, ability to connect the company's goals with user needs, and prioritization skills, all of which are core to being a good product manager. In this, you are expected to design a new product from scratch by considering users, their needs and finally the features of the product. This is broadly the scope of design questions. You will not be expected to do the actual UI designing of the product as the name might usually suggest.

Examples of Product design/ improvement questions

1. Design an intelligent table for restaurants.
2. Build a product for group travel.
3. Design a chat bot for the banking Industry.
4. Design a smart shoe.
5. Design a parking solution for Google Maps.

CIRCLES Framework

Although it is always recommended to fine tune your framework basis the question and interview dynamics, CIRCLES is the most popular design framework and a good place to start with in the initial phase of your interview prep. It would also be wise to not memorize & implement this framework word to word as seasoned product interviewers can very easily detect interviewees sticking to framework and will most likely pull you out of it via follow up questions. Regardless, this is how CIRCLES framework looks like:

C - Comprehend the situation

A product manager in real life gathers as much information as possible before building a product to understand the context better. Hence you can start with clarifying the goal (e.g., increase revenue, market share, or engagement), understand the constraints, if there are any (deadline, manpower constraints etc) , and understand the context (e.g., what is it? who is it for? Why do they need it?)

I - Identify the Customer

Determining the product's target audience is essential to ensure the product meets the specific needs and preferences of its users. It involves defining who the product is for, and understanding their characteristics, behaviors, and pain points. You don't want to build a product that does everything for everyone; hence focusing on one customer target segment is essential while answering. Personas can be made across various cuts:

1. Demographic: Age, gender etc
2. Geography
3. Profession
4. Psychographic

R – report the customer's needs

Outlining the target audience's specific needs is a pivotal step that involves gathering and listing the essential requirements and desires of the user base. This step ensures that the product development is aligned with what the users truly want and need. Creating use cases that align with each user persona ensures that

C – cut through prioritization

This step is all about focusing on what truly matters for product development. In doing so, it involves studying the customer needs you've identified and singling out those that your team must prioritize during the design and development processes. The best way is to balance factors such as revenue, cost of execution, user experience, and feasibility, among others, in order to determine where you must focus energy to deliver the right solution to target audience. Few Prioritization frameworks are:

1. MoSCoW

2. RICE scoring
3. Impact–Effort Matrix
4. Kano model
5. Feasibility, Desirability, and Viability scorecard

L – list the solution

Once you have prioritized the users and user needs, you then go on to build solution - more precisely features for those needs that your product will have. This step requires creativity and product thinking. Also knowing some existing innovative product solves will help you leverage them in your solution.

E – evaluate trade-offs

The second last step of the framework is to evaluate the trade-offs of your solutions. You can mention the pros and cons of the solution. For example, suppose you have mentioned a rating system for an accommodation app so that users can look at the reviews from previous guests and know what to expect. In that case, it may also lead to issues where dishonest reviews might hurt the owner's business. By describing the trade-offs, you come across as thoughtful, analytical, and objective. You'll also protect yourself from being defensive. If you've taken the initiative to critique your own solutions, the interviewer has fewer things to criticize

S – summarize your recommendations

In this optional step, you can take 20-30 seconds to summarize your answer using the following three steps

1. Which feature do you recommend?
2. Recap on what it is and why it is beneficial for the users and/or the company
3. Why do you prefer this solution over others?

FAVOURITE PRODUCT

The favourite product question is one of the most common question types in product interviews. It is often turned into a product design interview, through follow up questions like "How will you improve the product?". Prepare an answer for 1-2 products that you

genuinely like. Try to also prepare an answer for a hardware product, as the interviewer may specify that you need to talk about hardware.

Keep the answer about 1-2 minutes long. Try to cover the following aspects:

1. What is your favourite product
2. Brief description of the product: 1-2 lines. Focus on the user problem that the product solves. Pick one problem which you believe is the biggest problem that the product is solving.
3. Why do you like this product? Again, speak from the perspective of the user's pain point. For instance, if your favourite product is Instagram, you can talk about how it solves the user pain point of 'boredom' or 'connecting people with their friends'. For this problem, talk about how the product uniquely solves the problem, differently from its competitors or substitutes. You can shortlist 2-3 features at most to discuss why you like the product. Use this as an opportunity to show the interviewer your understanding of user needs and how features can solve this need. This part should be for about 1 minute.

As this is a standard question, practice your answer with your peers a few times and get their feedback on clarity and structure.

A typical follow-up question is “How will you improve this product?”. You can use the CIRCLES framework here. You may first clarify on what aspect you should think about improving- would it be acquisition, engagement, retention or monetisation. Based on the response, go back to CIRCLES, draw out user personas, and think about new features that can improve the product. Here, it is important to be more strategic than tactical. Do not say something small like “we should reduce the crash rate” or suggest some minor UI improvement.

GUESSTIMATE

What is a guesstimate?

It is a process to estimate a number using a rational and structured approach. There are several ways to solve – the process/rationale for the solution is more important than the number itself. In the product context, it helps the interviewer gauge how quick and logical you are with numbers and in turn analytics.

Key Evaluation Parameters

Critical:

- Structured Thought Process
- Logic and Rationale
- Comfort with Basic Math and Numbers (BODMAS, Ratios, %ages)
- Communication Skills

Important:

- Articulation of Assumptions (general observations, industry knowledge)
- Presence of Mind

Others:

- Sanity/Hygiene Checks
- Basic Understanding and Common Sense

Stepwise Approach to Solve Guesstimates

Define the problem

1. Define the problem as granularly as possible
2. Confirm understanding with the interviewer
3. Make modifications, if required

Construct & Deconstruct the Problem

4. Express problem as an equation or set of equations
5. Construct the problem from a larger point of view
6. Deconstruct the problem into specific sub-components
7. Make minor corrections / adjustments towards the end of the process

State Assumptions & Solve

8. Clearly state assumptions & proxy information to be used
9. Use logical justification to substantiate all assumptions / proxies
10. Plug information into the main equation and solve

METRICS

What is a Metric interview question?

Metric definition questions focus on your ability to define metrics that provide clarity on the health of a product or feature. Here's an example question: "What metrics would you use to determine success for Facebook Sponsored Posts?" There are many different metrics you could be tracking (e.g. impressions, clicks, return on ad spend, etc.) and the interviewer will want you to select the most important ones using a rigorous process.

GAME Framework

1. Goals: You should make sure you understand the product properly and agree with your interviewer on specific user and business objectives before starting. Agreeing on the goals upfront is important because what you measure will depend on what you're trying to achieve with the product.

So, how do you determine what the most important objective is? There's no single right answer to that question but you could begin by explaining your understanding of the product, the goal you think the product should seek to achieve and your assumptions for the same. Most common goals are often around Adoption, Engagement, Retention and/or Monetisation

2. Actions: Next, you should think about all the actions users can take in the product. Listing each action will help you focus on available metrics and avoid those that aren't trackable. The easiest way to do this is to think about what it really means for a user to be "engaged." You should aim to list every relevant action. However, it's also a good idea to avoid going into too much detail.

3. Metrics: Once you have a prioritized list of actions, you move to define associated metrics for each one. This is where you apply your quantitative thinking to convert actions to metrics. For example if you are discussing the action of placing an order on zomato, the product metric for the same would be number of daily orders, conversion etc.

4. Evaluations: After defining metrics, you should conclude the discussion by answering the initial question with the metrics you recommend. Finally, evaluate the metrics you

have selected by highlighting trade-offs and limitations. The last key step is to show that you understand the strengths and weaknesses of your recommended metrics.

RCA

What is a RCA question?

Root cause analysis (RCA) is a problem-solving method. It's used to identify the underlying causes of issues or faults in a product or the product management process. The objective of RCA is to discover what caused a particular problem, why it happened, and how to prevent it from happening again. Common format of this question looks like the interviewee asking questions and the interviewer answering them to provide more data to the candidate. A typical RCA question looks like -*You are a PM at Flipkart and orders have gone down by 10%. Figure out the cause and how to fix it.*

Step 1 : Clarify

Start by asking clarifying questions about the problem statement to go into the granularity. Few clarifying questions can be:

- What is the exact definition of metric? - Start with defining metric yourself and confirm if your understanding is right
- Since how long have this trend persisted
- Is the data reliable
- Across various cuts like geography, ios/android etc

Step 2 : Discuss external factors

You already have some context about the situation after step 1. Use this information to think of major external factors that could have influenced the product in any way.

An excellent way to test the involvement of external factors in a problem is to ask — “Is this an industry-specific problem or company-specific?”. Industry-specific problems can have root causes in factors beyond their line of work. (For example, a roadside vegetable vendor has a bad season because people have started buying packaged food post-COVID-19).

Some common external factors to check for-

1. Any recent natural calamity/Power Shutdown (can be asked when the trend is not gradual or a single point decline in the graph.)
2. New government regulation/policy change?
3. New product entry in the market/product substitute.
4. Sentiments on social media? (E.g. Controversial tweet by company, fake news around the company, etc.)

Step 3 : Discuss internal factors - detailed user journey

After ticking off external factors, if everything seems fine you move on to internal factors. These are factors within the product which might be causing the metric to go haywire. Reasons can include a product change - both backend or frontend, a product bug - mostly backend etc. For this the first step is to build the user journeys or funnel for popular actions in products. Once you have laid down the user journey, your next step would be to ask follow up questions on user journey - for example conversion at each node of user journey. Most often this will help you reach the conclusion.

Step 4 : Final conclusion & recommendation

Once you have identified the root cause, you are expected to summarize the entire discussion. Sometimes an interviewer might even want you to discuss solutions to mitigate the problem. It is always recommended to suggest solutions regardless of the interviewer asking you to.

GTM (Go-To-Market)

What is Go-To-Market/GTM?

Go To Market questions are usually not an independent question of their own, but a part of a larger product strategy or product design problem. It is a more 'generalist' question, testing your knowledge of strategy, operations, and marketing, in addition to product sense. Some ways in which it can be asked, are:

1. Ok, you want to design XYZ feature. How will you take it to market? (*You want to launch Stories on Blinkit App. How would you take it to market?*)
2. What would be the launch strategy for XYZ feature?

Frameworks

You can borrow the 3C, 4P, Segmentation-Targeting-Positioning framework (refer to consulting casebooks) to answer these questions. However, avoid blindly applying a framework, as this question is more about thinking on your feet and being practical about the real world applications of a problem.

The following factors need to be considered to tackle any Go To Market problem:

1. *Who are the users this feature is being launched for and what is the pain point it is solving?*

Here, briefly explain your understanding of the target segment for this feature. For instance, if the question is 'How will you launch 10 minute food delivery on Zomato', spend a few seconds sharply defining who will be the customer segment to launch this feature to first. For instance, you can say you will launch it for breakfast, for working professionals, as they don't have time to wait for breakfast or make breakfast on their own.

2. *How will you position this product for them?*

What will be the key value proposition for this user? Use your understanding of consumer behaviour and marketing to explain the usefulness of the feature for the user

3. *How will you reach this user?*

Think through what are the marketing channels available to reach this user. You should further structure the channels into online/offline, existing users/new users and so on depending on the context. If we are building a feature for an App that already has a lot of users, talk about using push notifications, email, etc to target existing users.

4. *How will you price the product?*

Only talk about this briefly if pricing is important to the problem. You can talk through the Pricing framework or even discuss from first principles. Here, you can also mention **promotions**, i.e. how will you incentivise the user to use the product. You can discuss free trials, discounts, etc.

5. *What are the operational aspects of taking this product to market?*

The launch of some products/features would involve a significant operational aspect. This is especially true of marketplaces where building the supply side is as important as building the demand side. If you are talking about launching a new category on ecommerce, etc, always talk about how you would build the supply side as well. For instance, in the 10 minute delivery for zomato question, you should think through how will you make sure meals are ready in 10 minutes, prioritising restaurants, the value proposition for restaurants, etc.

All in all, GTM is an extremely broad topic, and you won't have time to go through every aspect. Lay down your framework in the beginning and let the interviewer know which aspects of the GTM you will be discussing in your answer. If the interviewer wants you to focus on only 1 or 2 (which will most likely be the case), they will nudge you in the right direction. However, it is important to demonstrate to the interviewer that you are aware of all aspects.

PRODUCT STRATEGY

What is Product Strategy?

Product strategy questions are another category of broad questions which cannot be tackled with a one-size-fits-all framework. What one needs to keep in mind is to not make this a product design question. The key difference between the 2 is the scope of the solution space. Product Design questions are about building a feature or a product to solve a particular problem. Product Strategy questions are usually broader, thinking through the business as a whole or solving for an entirely new customer segment. Hence, think broadly when you are faced with a product strategy question. Remember to always ask clarifying questions to define the problem more sharply and narrow the problem statement.

Product Strategy questions tend to be interviewer-led. Unlike product design, RCA etc where one can use a framework and talk through it for the entire interview, in product strategy, the interviewer is mostly testing your initial thought process and ability to think on your feet. Hence, once you have clarified and narrowed the question, let the

interviewer know what aspects of the strategy you will be covering (your initial framework). The interviewer will then most likely jump to one of the points you have covered which you can then deep dive into.

While there is no format for a product strategy question, following are some examples of what has been asked in ISB placement interviews:

1. What should Netflix build in the next 5 years?
2. How can you build a social experience on an OTT platform?
3. How would you solve the language barrier in India?

Helpful Frameworks

As one can see, there is no framework that can be used to tackle all these questions. However, you can keep the following frameworks in your toolkit and use them as needed.

1. **Segmentation:** Segment users, identify white spaces (i.e. where the company in question and competitors have not entered yet)
2. **Ansoff Growth Matrix:** A neat framework to lay down the growth options for a company.
3. **Porter's 5 Forces:** Threat of substitutes, buyer power, entry barriers are important factors to consider

PRICING

Pricing and Monetization are critical aspects in product management and are therefore crucial for interview preparation as a lot of companies do ask these directly or indirectly as an extension to product design / improvement cases. The pricing elective can definitely be a plus to help answer a lot of these questions.

Some common questions asked are:

1. How would you price a particular product? How do you justify the pricing to the customers?

2. How would you increase the revenue of the product?

To answer these questions, there are a few important points to consider, which need to be clarified in the clarifying questions.

Determine the **business goal**: Generally, if the business goal is to increase the market share, we offer the product at a lower price and if the goal is to maximise profits, we offer a higher price.

Determine **current market state** and evolution:

1. Growing Market: Can use value-based or perception pricing, as the customers haven't formed an opinion about this
2. Mature Market: Pricing would depend on the business goal as mentioned above
3. Declining Markets: The pricing decision would depend on the business goal - to renew/pivot or exit the market

How **differentiated** is the product: Highly differentiated products can justify higher price. Moreover, cost Differentiation: If the company has a cost advantage over competitors, then it can justify lower prices

Target Segments: While pricing the product, we must consider our target markets as well. Understand the segment's willingness-to-pay (WTP) for the product. If we price it above their WTP, they won't even buy it. If we price it below their WTP, we are leaving consumer surplus on the table

Pricing Models

After evaluating the above points, one can go with one of the below models to price the product.

Cost Plus:

1. Find the total fixed costs and variable costs per unit
2. Set a markup above this, assuming you can sell X number of units at this price (must do market research and price elasticity for this)
3. This will be your price

Value Based Pricing

1. Find the total value we are generating for a customer – Can be how much they're Saving or how much extra money they will be making (if it isn't monetary savings, try converting to it, for example, if a customer saves a few hours, try to calculate the time value of that money).
2. Charge them something around this, based on business goals and pricing strategy decided above
 - WTP - Monthly income
 - Savings of customer

Competitor Based Pricing

Charge them somewhere close to what the competitor is charging, based on goals and pricing strategy, whether we want to go offensive or defensive. One can be creative about competitors, to stand out in the interview. For instance, the competitor to low cost airlines can be buses, or the competitor to Zoom is flights (as people would travel to do meetings).

In pricing problems, use at least 2 frameworks out of the 3 to come up with a **range of prices**. Typically, cost based pricing results in the lower bound price. One must remember that the interview is not looking for an absolute number but the thought process. Hence, an excellent answer would come up with a wide range, and some justifications (based on market conditions, WTP etc) as to where in the range will the final answer would be.

BEHAVIORAL INTERVIEW

Behavioral interviews test the softer aspect of your personality mostly for product culture fit. This is mostly the last round of interviews and is taken by a product leader in the organization. Very few companies take this round at ISB placements. There are two steps to preparing for these kind of interviews:

Step 1: Make a list of common behavioral interview questions

Behavioral questions are almost the same across organizations. Hence this step helps you prepare your answers before you step in the interview and improve your performance.

Some common product management related Behavioral questions are:

1. Tell me about a time you had to make a decision to make short-term sacrifices for long-term gains.
2. Tell me about a time you handled a difficult stakeholder.
3. Tell me about a time you made a mistake.
4. Tell me about a time you anticipated the needs of a customer.
5. Tell me about a time you used your analytical skills to solve a complex problem in a creative way.
6. Tell me about a time you disagreed with someone and how you resolved it.
7. Tell me about a time you failed. What would you have done differently?
8. Tell me about a time you had a conflict with someone. How did you resolve it and what did you learn?
9. What are your key strengths?
10. What are your key weaknesses?
11. Tell me about the most impactful project you have worked on

Step 2: Reflect on your career experiences

This step is important for you to prepare for the Behavioral questions. Your past experiences - preferably professional, are going to help you provide examples wherever possible. An answer backed by a real example is much stronger than a one without.

Hence it becomes important for you to reflect on work experience to pick up examples for most common questions.

INTERVIEW EXPERIENCES

Accenture

Role: Tech Consultant

Job Offered: No

Round	Type of Questions	Questions and Approach
1		About my background, why I want to join tech consulting, why will I be a good fit, any questions I have, how can I connect my past experiences to my role.

Overall feedback: The interviewer seemed to have already made his decision before the start of the interview. It was very short. It was pretty tough to convince why my background is a good fit for the role.

No tech questions were asked.

ADP

Role: Business Analyst -3

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Strategy;	ADP being a payroll handling solution provider, partnered with Visa to launch a card. Is this is a good move or a bad move? Answer: I guessed the problem they were trying to solve by launching the product and once that was approved, did a market analysis (TAM, SAM, SOM) and saw if this can be linked up and whether it adds value to the company as a whole and to their existing offerings and took a decision
2	Abstract;	VP round, was asked questions on my resume, why ADP, strengths and weaknesses.
3	Abstract;	Culture fit and HR round, more behavioral questions

Overall feedback: Do thorough research on the company. Go to their website, their engineering blogs. Most of the interviews will be on these. The more you talk about these, the better

Role: Product Manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/Work Ex;	I had implemented a project as a Research Assistant. I was asked to rethink how I'd approach the problem as a Product manager and how the solution could be sold and to whom.

Overall feedback: Product Sense is truly checked. Whatever you've done previously, look at it as: "How can this be sold to the customer?" Or "How else can this be sold to the customer?"

Role: Senior Product Manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/Work Ex;	Tell me about yourself followed by resume based questions, why PM ? Why ADP ? They were very keen on understanding one of my case comp wins for which the problem statement is in HR Tech.
2	Resume/Behavioural/Work Ex/Strategy	Round 2 went for over an hour with many questions related to my work experience particularly trends/threats in banking & financial services because of my work ex. Also asked me a question on long term

		winner between youtube vs netflix - pros and cons, tradeoffs There was also a question on how I would solve the issue of remote work leading to employee foul plays and how I resolve it. Overall the round had many short conversations on work ex domains and product strategy related questions.
--	--	---

Overall feedback: Go through the ADP Pre placement talk as it helped me with understanding the company's gamut of offerings and what stands out in ADP's culture of PMing.

Company Name: Airtel

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Metrics/RCA;Product Strategy;	I was asked About myself, Why PM (perhaps this was asked because I worked across the impact space), Why will I be a good fit at Airtel? - I basically had prepared very well for these questions as I come from a diverse background and I also am an engineer, so I was able to connect my interests in working with stakeholders to the role of a PM/ I gave examples where I have had PM-like experience and I connected my skills to Airtel's requirements. I was asked one question to test my PM skills - An RCA - You are trying to log into Airtel App but are unable to - diagnose. Answer) Here I basically asked clarifying questions - on device , which geography, which specific customer segment was facing this problem. Then realized that OTP was not being successfully sent for non-Airtel networks . Then I spoke about how I will address this using other MFA methods and how this solution can be A/B tested before rolling out. 2nd question - How will you decide to build a product? - AI chatbot to resolve queries - This was a long discussion, very first principles based - looked

		at tradeoffs between building and not building, focusing on customer behaviour etc. Trying to be as relaxed as possible and keeping it conversational regardless of how the interview is going is extremely important and be genuinely interested. I asked a couple of questions in the end as well.
2	Product Strategy;	This was a round with the Product Leader and the HR, it was a little late in the day so I was exhausted and a little flustered however I was as honest and invested in the process even though my answers were shaky. First I was asked the usual why ISB, why PM etc. Then a Strategy question where the HR roleplayed as the Product Leader and I was supposed to convince her to not build a particular product. Here I couldn't really figure out how to convince her and in the feedback I was told that keeping a key metric, for example CLV, and then guiding the entire discussion around how building something will or will not contribute towards it is important. Then I asked a question and we closed it. Overall it was very good interview experience.

Overall feedback: Know well about the industry trends, where the company is headed, how you fit into the role and company. Be honest and genuinely curious about any questions you have.

Role: Product manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");	Design KYC product which involves no use of facial biometrics. Need to use industry information to answer this question. Major discussions were

		regarding the industry knowledge in Fintech domain
2	Product Strategy;	1. How would you launch KYC product in a new market. Let's choose Malaysia, explain how to launch. 2. How to improve the KYC process of Airtel today ?
3	Product Strategy; Metrics/RC A;	1. How do you measure the success of KYC ? Define metrics to track performance ? 2. Is API better than SDK? Explain the pros and cons

Overall feedback: 1. It's a little luck based. Have your interviews scheduled early in the day.

2. Strong intent on joining Airtel needs to be there to convert the interview. Prepare answers on why Airtel and what impact you want to prepare beforehand.

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");	Design the landing page of an ecommerce app. Follow the basic frameworks and always have a rationale for your choices/prioritization. Prioritize at every step, be open to feedback. The interviewer panel (2 people) were super helpful and the interview didn't feel like an interview at all - more like a group problem solving exercise. Please remember to check in with the interviewer from time to time as you walk them through your

		process and adapt your answers/strategy accordingly
2	Product Design ("Design x for y");	Design uber for blind people. Followed standard approach while answering. Interviewer was a senior product leader at Airtel and probably the best interviewer among all that I had taken. With a senior person interviewing you, its important to also have a zoomed out strategy and not be too stuck up with technicalities.
3	Resume/Behavioural/WorkE x;	HR based round, pretty conversational and just final negotiation.

Overall feedback: Process was extremely smooth, interviewers were great throughout. Had the best time interviewing. Standard PM prep is sufficient.

Airtel- Continued

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;Product Design ("Design x for y");	My first round mostly revolved around my previous work experience. I was also asked a question on how I approached designing a product roadmap for one of the activities that I led in the past. After which, they extended this question to a hypothetical scenario involving me designing a product for the same. I approached this question like a product design question and dissected various customer segments, targeted the same, identified pain points, and then designed the solution. I also tracked the metrics and trade-offs and used the 4Ps to launch the product. Overall, it was a good round, and I could sense that the interviewers were impressed. One key takeaway: be thorough in your preparation for past work experiences, as interview questions can be unpredictable.

2	Metrics/RCA;Go To Market ("How will you launch X");Resume/Behavioural/WorkEx;	I was given multiple hypothetical scenarios that could happen at Airtel and asked to solve for them. These scenarios involved prioritizing responses to low metrics, clashing product release deadlines, and emergencies. They also asked for a 10-second elevator pitch for the Chief Product Officer of Airtel. In detail, they explored my data product experience from my previous company and extended that to another scenario, asking how I could implement digitalization at Airtel and what metrics I would use to track its success. Overall, my interview was highly intense, testing my prioritization skills, analytical abilities (metrics), and capability to handle stressful situations. A general piece of advice would be to take a few seconds before answering any question about which you have doubts. For me, writing down what I wanted to say—for example, for the elevator pitch—really helped me. Try to enjoy the process and be in the interview throughout. It will work out fine.
3	Resume/Behavioural/WorkEx;	It was a HR round, just focusing on negotiations—salary, location, and confirmation of the offer.

Overall feedback: I think everyone's experience is different. So my advice would be to be yourself, be prepared because a lot of my questions were tailored to product management to test your product mindset and my work experience, and enjoy the process irrespective of the result. Also, I read about Airtel, Airtel Digital, and its transformation plans for the next 5 years by going through their shareholders' letter. I used these facts while answering a few questions.

Airtel - Continued

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Go To Market ("How will you launch X");Resume/Behavioural/WorkEx ;	This round focussed on my resume talking about various projects and a GTM question for how would you envision a partnership between Airtel and a real money game (this was so because my past experience was with a real money gaming company). I first explained if a partnership is beneficial between both the companies. Then in the next part I detailed how would they partner, which products and then the GTM framework: Pre, during and post launch. I also talked about the revenue model
2	Resume/Behavioural/WorkEx;	This round was entirely behavioural. The questions revolved around my past experience in product, my involvement in deciding what goes in product charter. How do I prioritise tasks. How do I communicate with the engineering team. How do I incorporate last minute important items in the sprints.

Overall feedback: Had prepared to talk about high points in my resume and general frameworks and behavioural questions

Arcesium

Role: Sr Product Specialist

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/Work Ex;	Walk me through your resume. I came from data science so the natural next question was why Product. Answered as prepared. Line of questioning became very analysis heavy - 'say you have a platform and something is off, what is the line of questions you would ask of the data team to find answers' (an unstructured RCA question) Why B2B? What do I know about Arcesium - the breadth of services provided, range of products. Attending the pre-placement talk and going through their website to do a basic research helps.
2	Resume/Behavioural/Work Ex;	This was more on my working style and work philosophy. Drilled on why B2B over B2C. Strengths and weaknesses. Specific project deepdives that I had listed on the resume. Asked me which of Arcesium's products would I want to join - answered as prepared. I'd advise to be prepared thoroughly for every point and number you list out on your resume.

3	Product Design ("Design x for y");	This was a very data-science specific round that only I was asked to appear for out of all the shortlisted students at that stage. Was grilled on some ML concepts and was asked to design an azure pipeline for setting up a churn propensity model on product telemetry data. This was the only online interview I had, rest all were offline and in person.
4	Resume/Behavioural/Work Ex;	HR questions mostly, very interactive and unstructured. Be honest, be to the point, and bring out the fun side of your personality/interests/hobbies.

Overall feedback: Arcesium isn't too heavy on the fintech side when it comes to questioning; what they are looking for is preciseness, structure, and general culture compatibility. Otherwise the process was carried through well.

Role: Sr Product Specialist

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;	I was asked an introduction. "Why" questions on almost all switches in the career progression. Questions around why MBA for PM while you were already in a product company. Questions also around how will B2B be different for you from B2C and if you are ready for that shift. Other than that, some general

		metrics and quick design questions (did not go through the full CIRCLES framework, just gave solutions due to lack of time)
2	Go To Market ("How will you launch X");Resume/Behavioural/WorkEx;Metrics/RCA;	1. An in-depth round around WorkEx. Very conversational. Asked about each career progression and the learnings. Very real world problems given around how you will use data to convince a client of a product change. 2. Favourite product question and improvement. 3. How will you solve the problem where your biggest client wants a feature that is very resource intensive for the value it is giving? Wanted to understand if I will develop that or will I convince the client otherwise.
3		HR round with surprisingly one design question on designing some new features for Zomato and Swiggy. Otherwise general questions about strengths etc., with one peculiar question of how will you convince your fellow candidates that you should be given the offer above them.

Overall feedback: Be confident about your resume and the work that you have done. Understand that this is a B2B company that you are interviewing for. Most of your PM prep will be too focused on the end users (persona building and problem identification). This won't be the same.

---BCGX

Role: Senior Product manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");	Design an App that solves the problem of loneliness for blind people Used the circles framework. It was fairly interviewer led. He jumped across the framework to drill further on specific aspects such as features, prioritisation etc Throughout the interview he asked questions that tested prior PM knowledge. "how will you discover user pain points", "How will you set up analytics to track events", "what would the home page look like" etc So it was a mix of testing first principles thinking and also actual execution knowledge as a PM

2	Product Strategy;	As a young bank, what features would you include when building a banking product for young salaried people This was a very short interview - 10 minutes or so. He was just testing overall structure, business and product context, communication skills. Did not go into any detail. I could not use any framework either.
3	Resume/Behavioural/WorkEx;	This was with a Managing Director. He just dove deep into my past experience. Less focus on execution, more on the strategy and business model of the startup I was part of. Asked for some ideas on what the startup could do next, etc. It was more like an open brainstorming session.

Overall feedback: Know your CIRCLES framework thoroughly.

Keep drawing on your personal experience when speaking and mention how you may have done something similar before.

BCGX- Continued

Role: Senior Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");	Q : Design something for psychological needs of blind. This was more of a conversational interview where the partner asked follow up questions and you had to keep restructuring your approach basis what he asked. Was asked how would the homescreen look like, what features will the product have, how will you figure out the product performance. Then sort of a rapid fire with questions like how would you figure out user needs - talk about ways to do user research, tools that can be used to track metrics etc. Interviewer gave feedback to highlight product experience in forthcoming interviews.
2	Product Strategy;	This was a real case of BCGx. Our client is an OEM who has a lot of physical garages to revamp and sell second hand cars. They are currently a completely physical model. Digitise their business but differentiate the client from existing players like Cars24 etc. This was an unusual product strategy question. Building a structure on the go was necessary. I talked about the entire user journey right from someone being a buyer to becoming a seller of second hand car and how our client can harness the existing data they have to identify what to sell to whom basis user and vehicle attributes. Structured this as Explore->Identify->Implement.

Overall feedback: Practice a lot of product strategy. Not just BCGx but almost every other top product company will ask product strategy questions.

Blenheim Chalcot

Role: Product Owner

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;	Deep-dived into Resume points Tried to look for past experience in responsibilities typically expected from a product owner. Try to highlight places where you showed high ownership
2	Resume/Behavioural/WorkEx;	Resume based, past experience, culture fit
3		Typical HR interview What you would get out of Blenheim and what would you bring to the table
4	Metrics/RCA;Resume/Behavioural/WorkEx;	You're a PM for an ecommerce application and you see that your users are adding items to the cart but not checking out. Help us fix this

Blenheim Chalcot - contd.

Role: Product Owner

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");Resume/Behavioural/Work Ex;	Favourite app/ website, and you have to design a new feature for it
2	Metrics/RCA;	Drop in checkout orders for a e-commerce website. Why is it happening?

BlinkX JM Financial

Role: Product Manager

Job Offered: No

Overall feedback: Pre-assessments are a bit weird with puzzles and talk about a phrase or word kind of questions. Also pre-assessments were also done for select students only. Be mindful of the appetite of the company(get it from CBD) & look at their interview formats before giving them as preference.

BrowserStack

Role: **Product Manager**

Job Offered: Yes

Overall feedback: Focus on case deck submission -all my technical rounds were based on the case submission which helped because I had put tremendous amount of effort into it.

Role: **Product Manager**

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Strategy;Go To Market ("How will you launch X");Abstract;	Present the deck and questions around proposed solution were asked
2	Metrics/RCA;	Metrics based questions were asked from the deck
3	Abstract;	Hiring Manager asked about marketing related questions based on the extra curricular point from resume.

Overall feedback: Prepare your case deck thoroughly and be ready for Product strategy questions + metric questions

Role: APM

Job Offered: Yes

Overall feedback: Before and after submission, talk to people who're currently at BStack or have been in the company in the past and don't just restrict yourself to reaching out to alums to understand about company or case. Get case study reviewed from 2-3 people

to take their views and identify gaps in submission (had prepared a slide-by-slide improvement doc for interview discussion). Also be prepared to cite examples from past experience and be thorough with resume.

Role: APM

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Abstract;	Discussed the case ppt at length. Asked about what metrics I chose and why. Answered as prepared.
2	Metrics/RCA;Product Design ("Design x for y");	1. Product improvement: Improve parking system. Ans: Used the CIRCLES framework. Provided basic customer segments, basic problems with parking - unable to find your spot, people parking in wrong spots, getting to know there is no parking when you are already in the basement. Solutions- parking access card given to every employee that unlocks the parking spot for parking, an LED based detailed map outside the parking when you enter that gives red and green light for occupied and available parking respectively. Good discussion overall. 2. RCA: DAU for Live product has dropped significantly. Ans: Asked for how much decline, then started with basic framework of 4 segments - (1) metrics system working fine, (2) external factors, (3) internal factors, (4) Out of control factors. He denied everything I said - for eg., new dev pushed? change in UI? Some data server is down? etc etc but he was satisfied with the brainstorming and sent to next round.

3	Abstract;	- Introduce yourself - Why PM - at much length - Why MBA - again at much detail - Why not something else - Why browserstack - Explain your prev job to your dad in easy word - I worked in commercial insurance so I started with - "Hey dad, remember you sold life insurance in LIC? and you insured life. We insure buildings and horses. Was an interesting discussion" - Explained my desire to work in tech and browserstack's obsession with developers and the tech community - synergies with my goals - Focused on transferable skillset as I didn't come from PM background
---	-----------	--

Overall feedback: Standard product prep, emphasis on good case submission deck.

Role: APM

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");Metrics/RCA;Product Strategy;	This round was taken by the head of product at Browserstack, completely focusing on the PRD that I prepared. I had to go through the entire PRD for 30+ minutes, and he asked questions on every section of the document. However, a significant chunk of time was focused on the metrics that I defined, as he was interested in why I chose a particular north star and asked me to explain the same in

		detail. Overall, the interview was stressful and detailed.
2	Product Design ("Design x for y");Metrics/RCA;Go To Market ("How will you launch X");	Design a laundry service for ISB. I used a product design framework just to give the answer a bit more structure by asking clarifying questions, analyzing existing competition for laundry at ISB, assessing customer segments, targeting one segment—I chose students as they constitute the largest segment and will not have washing machines—identifying students' existing pain points, designing various solutions for the same, and prioritizing a few. I gave him two options: one is launching an app where users' involvement is minimal, as the laundry will be picked up and dropped off. Second, for students to do their own laundry by giving them access to several laundry machines where they can do their own laundry along with the digital product for booking slots. He then picked the second option and asked me to design a launch strategy for students to actively come and use the offline laundry service. I used the 4Ps to plan the pre-launch, launch, and post-launch activities. He then gave me many situations where students' might not have time, feel lazy to use the machines, cancel the service after booking a slot, etc., and asked me how I would tackle such situations. I used gamification, charging fines for cancellation, etc., to answer these questions. Interviewee followed with an RCA for a metric associated with one of the browserstack products.

		Overall, this was a pretty long interview that lasted for almost an hour where I was tested heavily on product sense.
3	Resume/Behavioural/WorkEx;	This was a company fit round taken by the executives of Browserstack. This focused predominantly on my work experience and why I wanted to join the company. Overall, the interview went well!

Overall feedback: Be thorough with the case and be ready to answer any question on the solution that you submit.

For interviews - develop presence of mind, be patient, and be thorough with interview prep on traditional case question types

Role: APM

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;	I was asked to explain my deck, they went into complete detail on how I thought of each and every feature. Browserstack is known to focus a lot on metrics and that is what they focused on for me as well.
2	Product Design ("Design x for y");	Design a parking app for a mall. I followed the CIRCLES framework to ask questions and come up with an answer. Tip is to be as detailed as possible and not try to rush through. This lasted for 1 hour
3	Resume/Behavioural/WorkEx;	Asked to explain my resume, They asked question from my hobbies in the end. I had to explain each and every point in my resume

Overall feedback: Do thorough research before making the deck. Make sure that you can validate your findings.

Role: APM

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");Resume/Behavioural/WorkEx;Metrics/RC A;	Started with questions on work ex. Discussed in good detail. Jumped straight into case questions. Explain the features. Explain the feature prioritization. What do you think a testers main concern is? No bugs go uncatched. Spent a lot of time on metrics - explain why a specific metric won't work, what can be the flaw in this one. Northstar identification.
2	Product Design ("Design x for y");	"Design Alexa for housewives". Interviewer wanted to know user segements, prioritization, pain point identification and then features - wanted me to walk through while thinking - "I want to understand your thinking process only". Wanted something crazy for moonshot like "using GenAI to soothe babies in their mother's absensce by

		replicating their voice and language."
3	Resume/Behavioural/WorkEx;	Standard resume questionnaire.

Overall feedback: Research a LOT about the product, actually use the products when making the deck. Focus on metrics.

Contlo

Role: TPM - Technical Program Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;Metrics/RC A;	Standard workex related questionnaire.
2	Resume/Behavioural/WorkEx;	Risk Mitigation and Prioritization of Roll Out
3	Resume/Behavioural/WorkEx;	Asked a technical question based on parallel processing and threads, load balancing

Overall feedback: Brush up on technical concepts and scrum master responsibilities

DevRev

Role: Member of Product Management

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");Product Strategy;Go To Market ("How will you launch X");	1. Explain the deck 2. How would you launch these features 3. Resume based questions 4. How would you measure success post launch
2	Abstract;Product Strategy;	1. Resume based questions 2. Why product management. 3. What is important to you in life.
3	Product Strategy;Abstract ;	1. Resume based questions 2. Why DevRev 3. What products have you worked on?

Overall feedback: 1. Be thorough on your resume

2. What ever you speak, have a solid reasoning to back it up

3. Read about DevRev

DevRev - contd

Role: Member of product management

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Abstract;	The first round was completely about the deck submitted. Most of the questions were asked to gauge the product mindset.
2	Resume/Behavioural/WorkEx;	This round 2 was with Director of Product. The questions were mostly behavioral and grilled on my past work experience.
3	Resume/Behavioural/WorkEx;	Mostly on workex, why PM, and why devrev.

Overall feedback: Make sure to begin the case preparation early on(1-2 months before).

Be prepared to backup every sentence in your resume

Preparing for personal interview questions is equally important

DevRev- contd

Role: Member of Product Management

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Strategy;Product Design ("Design x for y");	Interviewer - 2 Senior/Product Managers In 1st round, there was an in-depth discussion on the case which I submitted. They asked a lot of questions on why this feature, why this UI, counter metrics, etc. They used product design and strategy questions while cross-questioning on the ppt like they asked questions on How will you go about adding this feature, what can be the potential challenge, etc.
2	Resume/Behavioural/WorkE x;	The second round was with the Head of Product (Based out of US) which was quite chill but tried to know me as a person. A lot of questions were asked based on my past work experience. Questions like: One project that I am proud of, what colleagues/managers will talk about me as a person, do you listen to product management podcasts, Technical discussions on new tech like Chatgpt, machine learning, Artificial intelligence etc. Surprisingly he asked about Precision, recall, confidence, etc Toward the end, he asked me if I had any questions and we spent a couple of minutes

		discussing his personal and professional journey, etc. In summary, it was more of a conversational discussion.
3	Resume/Behavioural/WorkEx;	The third round was with a Senior member of the Product Team (India office) This round was more of a fitment round and he wanted to know me more as a person. He wanted to know why I moved from a big tech company to a startup (My profile) and why I wanted to join a startup. He also asked me about why product management, why devrev etc.

Overall feedback:

1. Keep the basics clear - Product Design, RCA, Improvement, Strategy, GTM (This will be applicable across all companies)
2. While you are making the presentation (pre-assessment) - Go in depth of each feature you are proposing, make sure to mention as much detail as you can.
3. Check about the company, and attend the pre-placement talk to learn more which will give you talking points in the interview.

Role: Member of Product Management

Job Offered: Yes

Round	Type of Questions	Questions and Approach

1	Product Strategy;Product Design ("Design x for y");Go To Market ("How will you launch X");Metrics/RCA;	Before round 1, had to submit the case on taking a product of your choice & suggesting improvements. I had submitted - product improvement for spotify 1. Define product strategy (user persona, needs, problems faced, solutions, metrics) - - New/exploratory users of spotify and how they wanted to use spotify podcast section but didn't know which podcast to check out (podcasts need significant time investment as they're long form content, so users want some level of certainty) - Solution: Review system for podcasts 2. What challenges would you face in implementation - - Design (putting the rating options in a place where it nudges the user to look at it & take a call) - Scaling it up - how 4.5 rating with 100 users feedback is different from 4.5 rating with 5 user feedback - so how do you build a rating system with sufficient user count backing it 3. How would the strategy change if you were to do this for an american consumer as against Indian consumer - Indian content goes more viral on account of sensational content whereas american content does value informational content (example - huberman labs podcast also gets 500k+ views on youtube) 4. How would the strategy change if you're working in a 300 member startup as against a 5000+ team strength like spotify - Bandwidth management - in spotify one can build a dedicated team, in a startup probably bandwidth needs to be borrowed till MVP is built - Pace of implementation - ramp up (startup) > ramp up (enterprise firm)
---	--	---

2	Resume/Behavioral/WorkEx;	15 mins interview with head of product 1. Your goals, what matters to you in your career - Desire for vertical growth over horizontal growth (my previous role was chief of staff which only gave horizontal exposure) 2. Where would your manager give +ve feedback and where would he/she suggest areas of improvement - Positive Feedback: Aggressiveness in getting things done, project management - Area of improvement: Give more pushback 3. Resume walk through - Standard story of where i studied, started in my career, what have I learnt over the last 5 years and a 30 second summary of each role 4. Challenges faced while doing cross functional work & how did you solve it - Aligning incentives to get everyone to work together - Leveraged founder backing to state importance of project so that everyone attends to my needs with top priority Since this was an interview with head of product, there was zero room to fuff - he was an absolute "cut to the chase" person & even intervened when I was giving lengthy answers
---	---------------------------	---

Overall feedback:

1. Do a lot of product sense exercises - build on fundamentals of how a product is being built, stick to first principles thinking over the usual templated approach of user persona, needs, problems, solutions, metrics etc.
2. Understand the product you're interviewing for.
3. Have a startup mindset when sitting for interview - don't think old school enterprise startups - these folks are looking for high agency players who will identify gaps & focus on making an impact consistently
4. Say "I don't know" when you don't know - extremely sharp folks working in this team (most of them are also prior B school grads/top engineering school grads) - so they see through all the fuff

5. Have a positive attitude, smile, show you want to be a team player (apart from that they put in genuine effort to make you comfortable during the interview)

—

Role: Product Manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkE x;	Asked me to explain the deck, think of cons of having these solutions and talk about metrics
2	Resume/Behavioural/WorkE x;	Round with VP of product. Asked me about my resume and what motivates me to stay in product
3	Resume/Behavioural/WorkE x;	Resume based question again. Asked me about work experience and since i already had PM experience, they wanted to ask about roadmap and prioritisation.

Overall feedback: Research about the company, check the website and what new initiatives they are working on.

Spend good time on the deck

eGovernment Foundations

Role: Associate Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Guesstimates; Abstract	Q1: Estimate how much a Swiggy delivery agent must be paid for him to break even on his costs. Approach: Identified fixed costs of insurance, vehicle and divided it to a per-month cost, cost variable with number of deliveries such as maintenance and petrol. Q2: Scientists have invented a machine to kill the mosquitos that cause malaria. Who will you sell this to? Approach: Clarified where the problem is present, what is the size/scale of the machine, break-down of the machine costs into upfront costs and maintenance costs, efficacy of machine. Identified developing and African countries as major market, and that individuals' purchasing power is low--hence look at governments and NGOs as buyers. Personal questions like what are the problems I want to solve (Build infrastructure to solve Bengaluru's traffic problem for example.)

Games 24*7

Role: PM-2

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");	1) Favorite "physical" product and the features I liked most. Apple watch and listed 4-5 features that I loved best vis-a-vis other competitive products. Was drilled on the other available solutions and asked to do a deep-dive on apple watch's USP 2) As a follow-up, using the 2-3 features of apple-watch that I liked, I was asked to extrapolate them for IRCTC's app and asked to see how I could improve the same. Each feature that I listed was further probed on its applicability to IRCTC and a deep-dive for each was asked. Total interview lasted about 1hr.

2	Product Strategy;Go To Market ("How will you launch X");Metrics/RCA;Resume/Behavioural/WorkEx;	1)Was asked to explore the new Whtasapp feature of "channels" on my phone in real-time and list the features that I felt were interesting and some features I felt were not that great 2)Based on my analysis, I was further probed on what I felt was the feature strategy for WA and what I believed could be its play vis-a-vis other social media platforms such as Instagram, etc. -This was again a deep-dive on features, product strategy and GTM. 3) Was also asked an RCA 4) Behavioural question asked on conflict management and how I worked within teams and ensured all team members were aligned and delivered the required output.
3	Resume/Behavioural/WorkEx;	General questions on my background, since I was pivoting, asked me about my prep levels and what I did to learn more about PM.

Overall feedback: Overall, very conversational questions were asked. Focus on the case should be on making sure it is analytical with lots of nos, data and beautifully crafted decks.

Gemini Intergalactic

Role: Product Manager

Job Offered: Yes

Overall feedback: Interviews were more towards judging how you would fit in a product manager role based on your situational analysis and work experience

Role: Product Manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/ WorkEx;	Primarily behavioral questions were asked. How do deal with multiple stakeholders? How did you prioritize their requirements How do you handle conflict? Navigating amiguity? Ended with resume based questions

2	Resume/Behavioural/WorkEx;	Asked me to rate myself on my case submission, then asked me some questions about it Slightly stress based Asked me to choose some features I had worked on (resume or otherwise) and asked me how I went about building the feature (problem discovery, solution hypothesis etc), about the north star metric of each, grilled me on why this was the metric etc Some feedback I got - Gave a 20ft view of things I had worked on, should have been able to speak about or better bring out the nitty gritty of the features I had worked on if I did really work on them Endure the stress with confidence, stand your ground and humbly back it up if possible
3	Product Design ("Design x for y");Resume/Behavioural/WorkEx;	Product Design - Design an alarm clock for the blind and elderly Favourite product
4	Resume/Behavioural/WorkEx;Go To Market ("How will you launch X");	How would you launch Gemini Exchange in India (regulation callout was important) Opinions on long term viability of cryptocurrency and how it will evolve going forward?

Overall feedback: Have some understanding of underlying technologies used (cryptocurrency etc)

HCL Software

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");Metrics/RCA;Product Strategy;Resume/Behavioural/WorkEx;	Interview time - 50 mins. - Asked about work ex and the product I was working on. - Since I had worked in ICICI Bank, they asked about what are some issues currently in the user flow and to list down some improvements that can be made for the same to iMobilePay app. - Asked me to choose any platform and list down what should be North Star metric for the platform. I chose YouTube. - Asked about my view on whose recommendation engine is better - YouTube or Netflix and why? - Asked about my fav TT player and a recent TT player who won an Arjuna award (since I had mentioned TT in my extracurriculars) - Asked about my ELP (Zomato) and what recommendations did me make to Zomato. Continued further with - what should be 3 factors that a cloud kitchen should focus on who wants to compete with the likes of Swiggy/Zomato
2	Resume/Behavioural/WorkEx;Product Design ("Design x for y");	Interview Time - 35 mins - Work ex questions - Fav product and list down improvements for it - 2 guesstimate question

3	Resume/Behavioural/WorkEx;	Interview time - 15 mins - Discussed about the company role and CTC discussion
---	----------------------------	---

HiLabs

Role: Product Manager

Job Offered: Yes

Overall feedback: Be very thorough with the case assessment solution and trade offs. Behavioural questions were asked in every round. My guessimate answer was a bit off but the approach mattered. As the company had data science products, they preferred people with hands-on tech experience and Healthcare industry experience. There's scope for salary negotiation with this company - leverage it.

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Case presentation	1st round was presentation of case submitted. Questions were asked around solution pitfalls, edge cases. Drawbacks and feasibility of solution were asked

2	Guesstimate; RCA	Introduce yourself, Why PM given your experience?, What's the most used app on your mobile ? How will you improve it ?, Guesstimate of the north star metric from improvement question, RCA on sign-ups falling down by 30% on naukri.com
3	Behavioural;	Behavioural and situational questions with VP, Product. Followed by HR

Overall feedback: Case submission seems to be key

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Metrics/RCA;	It was a case-based round, where I was asked to give a run down on the ppt I submitted for my pre-assessment. Post which I was asked to explain the metrics and future improvisations. I went from slide to slide, with emphasis on problem being solved, the users and the buyers, the implementation and metrics

2	Product Strategy;Product Design ("Design x for y");Abstract;Metrics/RCA ;	My round 2 was a mix of everything product. Started with a guesstimate (How many healthcare providers are there in the state of Louisiana), then went to RCA (Number of Users opening Instagram has dropped, boiled down to the post bumping algorithm ended up bumping sensitive content onto user feeds. This was because there were changes to the algorithm to increase advt based revenue), then went back to the pre-assessment presentation where I was asked questions on metrics and was asked to find faults with my UI design
3	Abstract;	This was a VP round, where I was asked questions on my resume, why HiLabs, why healthcare, short term and long term goals
4	Abstract;	HR round, was asked strengths, weaknesses, leadership style

Overall feedback: Need to be tight with the responses and link those responses to your resume point. Delve deep into product design and RCA because your case assessment will be picked on these points.

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");Metrics/RCA;Resume/Behavioural/WorkEx;	How did you implement a web scraper for your project. What are the AWS components that you used in the architecture. I was asked a couple of questions directly from my case submission post presentation. I was also asked to price the feature I suggested. I was also asked to come up with a project plan to implement the feature & go through the phases of SDLC
2	Product Design ("Design x for y");Metrics/RCA;Resume/Behavioural/WorkEx;	Explain SVM supervised learning algorithm used for sentiment classification. Number of users who are using Instagram has dropped by 15% in India. (Answer - Indians were busy watching world cup) Design a product for people who are scared of animals / who want to adopt pets but are not willing to.

3	Product Strategy; Resume/Behavioural/ WorkEx;	I was asked to elaborate on my diverse educational background in India and discussed my motivation for entering the fields of data science and machine learning. Additionally, I was asked to explain each phase of software product management, by providing a detailed example. I was asked to list methods for gathering consumer requirements for a product and discuss the approach I would use to identify individuals purchasing a specific brand of toothpaste in the market.
4	Resume/Behavioural/WorkEx;	During the fourth round, which was an HR interview, I was asked to provide personal and professional examples illustrating the three pillars of HiLabs: challenging the status quo, prioritizing what is right over who is right, and demonstrating ownership. Additionally, I was asked to explain my motivation for choosing HiLabs and elaborate on a HealthTech relevant past project during the discussion.

Overall feedback: In your preparation for product design questions, go beyond prioritizing solutions. Address guesstimates (user segment sizes), product strategy (4Ps), and metrics. Familiarize yourself thoroughly with the company's product offerings. Delve into the technologies mentioned in your resume and those used by the company. Recall relevant past projects, especially in health tech, and articulate how your expertise can enhance the field.

HiLabs contd

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Strategy;Metrics/RCA;	It was a debrief of the actual case study that was asked in the pre-assessments. Questions became a lot more detailed as I had a background in data science already, so focus on implementation of proposed ML/AI solutions took prominence. Doing a thorough research on existing company products, and syncing with alums to understand the domain better as long as possible strategies that the company might already be thinking of (or pain points they are struggling with) helps a lot. The interview ended with situational questions that were of an RCA nature. The interviewer asked me what-if some of my proposed metric in the case study showed a dip - how would I ascertain why that happened and what would I work around the bottleneck.
2	Product Design ("Design x for y");Product Strategy;	Design an app for pet parents - fairly logical, followed the process. Interviewer kept adding more nuances as I went through so the challenges were incremental as we went through solving the case. The interview ended with a guesstimate of number of pet owners in India.

3	Resume/Behavioural/WorkEx;	This interview was by the head of product. Really focused on talking about culture at Hilabs and what they are seeking for. A lot of behavioral questions that (I assume) tested the culture fit. Lean in on things that you know a high paced start-up in the healthcare space is looking for.
4	Resume/Behavioural/WorkEx;	HR round. Was pretty standard bunch of behavioral questions, answered as prepared.

Overall feedback: Definitely build a strong foundation for data, and PMing in the B2B space. Do reach out to alums for guidance during pre-assessment cases. Be innovative but grounded in your response. Standard product prep will help during the interview rounds.

Incedo

Role: Associate Project Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Abstract;	It was based on the case assessment given regarding the allocation of resources and the rationale behind the choices in different pnc.
2	Abstract;	It revolved around my previous work experience in the security sector like what was my role like, what was my understanding of risk and compliance.

3	Abstract;	It was more of conversational interview revolved around behavioural aspect. What was my role like in the organisation? What is my understanding of risk and compliance? Why did I choose ISB? Why MBA after government job? Where do I see myself in the next 5/10 years?
---	-----------	---

Media net

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Abstract;	Q1. How many marriages in India per year - typical guesstimate problem. (Answered in detail here - https://theobviousstrategies.wordpress.com/2016/01/19/estimation-of-the-number-of-weddings-in-india/) Q2. How will you design a dashboard for a CEO at Grammarly - Clarifying Questions - What is Grammarly, How does it make money? What is the purpose of this dashboard? How often will a CEO look at this? - Daily dashboard - Add a Time range widget at the top (CEO can change the time duration and the dashboard will adjust automatically like Metabase, Data Studio etc) - No. Of new subs everyday (Most important metric because Grammarly makes revenue through subscriptions) - Time chart of subscribers - Signups , Avg % conversion, cohort % conversion

		Q3 RCA - Amazon has 40% dip in Smartphone sales. Figure out why? - Removed external factors first - Broke down sales into: Sales = GMV = MAU * % conversion to phone * AOV - Broke down the entire journey - End answer was - Problem with old Mobile exchange on the Product Description Page
2	Abstract;	Q1. Should Spotify enter the audiobook market Follow Market Entry Framework - - Market Attractiveness - Audible makes \$1.6B in revenue (Luckily I remembered this number and used it as a proxy to figure out the size of the market) - Operational Feasibility - Financial Feasibility Q2. Let's say Spotify has decided to enter the market. How will you design audio book for Spotify - Basic Circles Framework - Spoke about both the author and the listener. Interviewer was interested in how I would solve for recommendations of a book, what will be the business model etc Q3. Assume you are PM at Google Search. How will you rank search ads? Started the answer by clarifying my understanding of search ads. Spoke about how the quality of the ad was important. Considered the following factors - - Bid Amount, Past historical data, SEO data, Relevant backlinks, Cookies, Location, IP, Time of day I was asked to list 10 factors. Q4. Swiggy recommendation of a completely new user - How will you solve recommendation for a completely new

		users who you have no data on? The interviewer wanted me to create models with factors irrespective of how important those factors are. Listed the following factors - - Time of day (If its lunchtime recommend meals, if its evening then recommend snacks), Device Location, Gender, Date of birth, Isp, Source of install, Email id (Getting data from 3rd parties about this user behavior through email id), MAC address , Nearby users, Phone number , Contact list (Check the food choices of contacts who are on Swiggy and recommend accordingly)
--	--	--

3	RCA, Metrics, Abstract	Q1: RCA - ARPDau of Swiggy is down. Figure out why Did not follow the external, internal RCA format as the interviewer had specified ARPDau. Broke down ARPDau into (Total Daily Revenue)/DAUs. The broke down Revenue to DAU*Conversion Percentage * Average Order Value The answer at the end was conversion percentage. Q2: For Swiggy - If there is a graph with time on x axis and conversion percentage on y axis. How do you think it'll look? I assumed that there are 3 kinds of users - in a hurry (50%), discount seekers (30%) , gourmet (10%) It will start at 0 for some time (as every user will take a minimum amount if time to order) , then it increases (this is the time taken by "in a hurry" users, then it goes down (discount seekers might check multiple apps and restaurants). There is another small increase as some of the discount seekers will start converting. Assumed gourmet orders are too few to consider. Q3: Now, imagine you are a PM at Swiggy, How will you reduce conversion time? This is basically a design problem with the objective to reduce conversion time. Prioritized discount seekers persona. Pain Points - - Don't know what to order - Don't know what cuisine to order - Which restaurant should I order from? - Which dish should I order? Solution: AI - asks me which cuisine should I order and then suggests package which converts in one click. An example of a package can be Curry, Rice and Juice from a specific restaurant. Q4: Assume you are a PM at Youtube who built the Skip Button last year. Somebody comes and asks - Why did you build it? How did you know that this is the right product?
---	------------------------	--

		There is a conflict here - Not putting skip button will destroy user experience and they will churn because of too many ads. Churn will reduce total watch time (hours of videos watched) and hence reduce ad revenue. Putting skip button will reduce ad revenue as users will never see the full ad. I answered that I will do an experiment. I will add skip button for a small set of users. The hypothesis was that the improvement in experience (because of a skip button) will increase the engagement (watch time) so much that the overall ad revenue will increase. If the experiment works I will roll out the skip button to all the users.
--	--	---

Role: Product Manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Metrics/RCA;	RCA on YouTube videos views going down. The answer was that internet plans have become costlier. Obviously the points were on how you break the problem down. Improvement question for Uber.

2	Resume/Behavioural/WorkEx; Metrics/RCAs;	Behavioral, Favourite Product, Guesstimate, metrics dashboard. Asked about introduction and questioned the career progression moves. Then focused a little on extra curriculars around running and cycling. Asked about a favourite product to which I said Google Maps and how that ties up with cycling. Asked for another that is more inline with my interests. I mentioned Strava. Then questions on why is it my favourite. Then asked me to do a Guesstimate of the yearly active users of Strava (from just cycling and from overall pov). Then asked a question to design the metrics dashboard for the CEO of Strava. I broke downwards from the Northstar, and from the top metric of each aspect of the app (community, recording, personal progression etc).
3	Product Strategy;	This was more of a technical High Level Design interview. I think that was solely because my background is of Computer Science. I was told that I am the PM for a company that makes browsers and we have recently acquired a module that tells if a website is malicious or not, but takes 45 seconds to deduce that. The question was around what value does the customer get from it, how will I integrate the module, and how will I roll it out to the customers. The discussion went into a server side vs client side cache, LRU vs MFU Cache etc. The total length of the interview was around 1.5 hours.

Overall feedback: Good interviews. The company tests your PM interview prep. Focus on first principles.

Role: Associate Product Manager. Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Metrics/RCA;Resume/Behavioural/Work Ex;	Resume runthrough followed by case submission- he asked me to give a rundown of painpoint -> solution -> metrics pipeline for 2 of the solutions. Then drilled on metrics for a short period. Moved on to a guesstimate - Number of iphones currently in use in chennai. I had looked through the general guesstimate numbers in the consulting casebook/btc handbook so used those directly. Solved the question with top down population breakdown approach. 2 key things he mentioned he was happy about - 1. Outside the normal iphones, included refurbished iphones which changes the affordability numbers 2. After calculating the approx no., verified the order of the answer with the Indian iphone market share numbers Kept checking in with him for the approach, he helped validate assumptions and course correct wherever necessary. Next was an RCA - Uber PM investigate why revenue has dropped in the last 3 months. Used the standard framework, made sure to check edge cases because he wasn't in a rush. Once I arrived at root cause went on to solutioning for those and metrics to track effectiveness. Since I had worked as a developer before he asked some simple system design questions about databases and caching (he explicitly mentioned it was only because I had these points in my resume that these questions were asked) This round was more than 1.5 hours long.

2	Product Design ("Design x for y");Product Strategy;	I felt this was designed to be a stress interview. 1. You are a business person in India, come up with a strategy to monetise private parks - He asked for 10 methods, mainly to judge creativity and thinking under pressure. Standard clarifying questions. I came up with the unlikely answers but missed out advertising and parking. 2. Design an accessible and user-friendly spice rack for blind people - Mainly focused on defining personas and pain points, then he kind of got impatient and skipped to rapid solutioning. Progressively wanted more and more automation in the solutions. 3. A torch and bridge puzzle - goal was to find out minimal time taken by 4 people to cross a bridge given 2 people had to go together at the slower person's pace. This round went for 1.5 hours as well.
---	--	--

3	Resume/Behavioural/WorkEx;Product Design ("Design x for y");	Round with a senior member to understand empathy and culture fit. 1. Design a product to allow a layman to plan their financial freedom after retirement - He didn't want me to limit myself to frameworks. The interview was very conversational. We discussed some general trends in India and then delved into personas, pain points etc. He was a finance person, expected me to come up with a simple formula for building the app's backend. Used some concepts from FADM and CFIN, no idea if they made sense or not. This round was more about intuitive UI/UX, user journey etc than metrics. Behavioural questions to understand why PM, why Media.net, why ad tech, why B2B. Ended with him answering questions about the company, culture, scope of adtech etc. This round was about an hour long.
---	--	---

Overall feedback: Standard PM prep, behavioral and resume mock interviews, basic guesstimate prep.

Role: APM

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");Metrics/RCA;Product Strategy;	Interview time - 70 mins 1. RCA - You are PM at Amazon. The no of orders on Amazon has decreased by 10%, how will you proceed 2. Guesstimate - Estimate the revenue of a toll plaza on delhi chandigarh highway 3. Design a dashboard considering you are the PM of Uber and you have to present the dashboard to CEO, what all metrics will you measure and what are the top 4 metric that would be visible on the top 4. What is the difference between cookie and cache, explain both 5. Do you have any questions for me
2	Product Design ("Design x for y");Metrics/RCA;	Interview lasted for ~60 mins 1. You have to design a e-newsletter. List down the parameters (e.g. age, region, language, news medium (audio, video), duration/content size) you would consider for the segregation of news. This question was kind of tricky since news shouldn't be based on factors like gender, income, political inclination because this brings in bias into the recommendation engine. 2. You are a PM trying to build a product for people to learn musical instruments. You do not have any boundations (wrt funds, creativity, technological boundations)

Overall feedback: Media net asks all types of questions - Product design, guesstimates, product improvement, RCA, GTM/pricing. You need to be well practised with all types of questions.

Microsoft

Role: Product Manager. Job Offered: Yes

Round	Type of Questions	Questions and Approach
-------	-------------------	------------------------

1	Product Design ("Design x for y");	The first round involved a Product Design question "How would you design a fridge for the blind"? Used a simplified version of the CIRCLES framework, starting from user-personas. Divided my personas into two buckets, fully/partially blind and alone/with support. This gave me 4 user personas of which I chose fully blind and living alone, justifying it with the societal need for such a solution. Based on this persona, I tried to come up with pain points: don't know what's in the fridge, hard to find things already present, hard to stock the fridge. Finally based on these pain points I came up with the solutions: tactile markers, AI based voice guide and shelves with weight sensors. I used simple High Medium Low t-shirt sizing to rank these solutions based on Value/Effort and decided the weight sensors would make for a good MVP and later we could incorporate AI assistance. At this point the interviewer asked me to reconsider my pain points and think a bit more about the user's perspective. I realised that if they're living alone they're probably stocking the fridge themselves and so the pain points weren't valid. She gave me the time to rethink my pain points at which point I came up with two: not able to quickly check what's in the fridge, and what is looking visually off (rotting). Based on these two I suggested AI based recipe suggestion and sensors to detect rotting vegetables. I did the same Value/Effort analysis and went with the sensors. I moved on to the metrics, I was honest with her that I had not worked with hardware products much and so was just trying to think of the metrics that made
---	---------------------------------------	---

		the most sense to me. and suggested an A/B to see if the frequency of rotten vegetables identified would be more for people with the sensors than those checking by feeling/smelling the vegetables. Then I suggested comparing the detection vs throwing rates. The idea was that if people weren't throwing vegetables as often as the system was detecting it then perhaps its oversensitive and not identifying the vegetables well. I mentioned that I would have come up with a counter metric but was struggling to think of one on this occasion. She appreciated my candidness and liked the fact that I revisited my pain points when prompted and was able to come up with new solutions.
--	--	---

2	Product Strategy;	This round involved a brief strategy question: "You are a PM at Facebook around 5-6 years ago, how would you release reactions (like/love/sad/angry/excited)". She explicitly said she did not want me to approach it as a design case and assume that all that is already done. I asked some clarifying questions such as which geography we were operating in, and she said she would like me to figure that out. I mentioned I would understand the market better and come up with user pools who would be most likely to adapt such a feature (US coastal cities or Tier 1 cities) to first run a pilot test with, after which I would run an A/B within comparable user pools to validate the hypothesis that this change would increase engagement. She asked what metrics I would look at during the launch and I came up with the following: 1. # of likes/user vs # of reactions/user in the A/B experiment to see if people are reacting to posts they otherwise would not have liked (to express negative emotions such as sadness or anger) 2. # of posts/user, are people making more posts due to the expectation of getting more reactions? She asked me what would be the overall metric I would want to look at for this launch and I said it would be Stickiness (DAU/MAU) Overall it was a nice interview experience, the interviewer appreciated how I explained everything that I was thinking in a nice structural manner.
---	-------------------	---

3	Resume/Behavioural/ WorkEx;	The final round involved a general run through of my work experience and resume. I had previously worked on a web-based EdTech platform and so he asked me how I would go about moving it to mobile. I came up with the following plan that I would present to the stakeholders to bring them on-board with moving the platform to a native app: 1. Assess how users currently interact with the profile. I knew that for the case of my company it was mostly through mobile to begin with. 2. Try and understand the usage patterns, are these users only signing up for courses through mobile and then attending them on the web or do they prefer mobile in all use cases. 3. Based on the research, assess the increase in user retention with this move. 4. Assess the development and design costs and timelines of creating the app. 5. Create a phased roll-out plan to test the concept. He quizzed me on each step but primarily on the problem hypothesis phase in steps 1&2.
---	--------------------------------	--

Overall feedback: Practice your Product Design questions well, Microsoft is notorious for PD questions.

Know metrics inside and out. Each round involved scrutinising metrics.

I would highly recommend understanding why and how metrics are used and approaching it with a more first principles approach than memorising frameworks (though the frameworks make for a good starting point).

Role: Product Manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Metrics/RCA;Resume/Behavioural/WorkEx;Product Strategy;	MS interviewers want to drill down majorly on your basics. They will bring the discussion down to very minute details by keep asking questions. Discussion lasted for 35-40 mins - Started with Resume and previous work-ex - Came to favourite product. I had prepared this (Linkedin). Explained more on what value does Linkedin create. Went back and forth with the list of features that could be introduced to improve user engagement on the platform.

2	Product Design ("Design x for y");Metrics/RCA;Resume/Behavioural/WorkEx;	The second round lasted for 70mins + - The interviewer started with work ex discussion. Questions like - please draw the system architecture on a page and explain how data was moving/stored. They wanted to understand how much depth I had in the work done. - Next question was on product design - You are a PM at a travel company (I took MMT). Started with some clarifying questions and moved to defining the goal (objectives and OKRs). The interviewer put a lot of focus on why specific goal was chosen and further defining the goal (I chose user engagement). Next user segmentation was discussed. You have to give proper reasoning as to why you are choosing the user segment and this reasoning should align with the goal you chose earlier. Next I listed down the pain points on which interviewer said to pick one pain point and come up with a solution. Once the solution was discussed he wanted me to focus on the user journey and come up with 2 more solutions to the same pain point. Going through the user journey I was able to answer 2 more solutions and interviewer looked satisfied. Finally, he asked me to draw a rough wireframe of the solution proposed.
---	--	---

3	Metrics/RCA;Product Strategy;Product Design ("Design x for y");Resume/Behavioural/WorkEx;	Final round was with Sr Director of Product and another senior PM. Round lasted for 35 mins - Asked me about my work ex and went in detail about specific projects I had done. - Improve People Recommendation Engine of LinkedIn (they chose linkedin because I had mentioned it in my first interview).
---	---	---

Overall feedback: You should be thorough with your resume. Each and every word can be picked and asked. The interviewers have a knack of giving very unorthodox problem statements. It's necessary to not panic and think wrt first principles. The interviews will be more of a discussion where they would test your understanding of concepts.

Navi

Role: Associate Manager - Analytics

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Metrics/RCA;	Case based. I was asked to do an RCA on swiggy. Question: Swiggy spends \$X on on-boarding 10 new customer but it sees that only 3 of them come back to the platform. Do an RCA and Suggest methods to increase this number. Answer: I identified demand side and supply side value drivers, I was asked to troubleshoot supply side issues. Came up with 3 initiatives, one hackathon, one shortterm and one moonshot solution

2	Abstract;	Guesstimate. I was asked to guess the number of uber rides in Hyderabad metro city. Uber rides as in only cars from point A to point B, where A and B are with in the Hyderabad city
3	Abstract;	Personal Interview Round. I was asked questions on my resume, why analytics, short term and long term goals
4	Abstract;Metrics/RCA ;	Case Based round. I dont remember the case, but it was on the lines of the Swiggy case earlier

Overall feedback: There is no particular format of prep for this company. The process is a little too abstract. But from overall experience, be prepared to do basic RCAs and be thorough with your resume

Role: Product

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Abstract;	1. Imagine you are the business head at Cadbury. The company wants to launch Gulab Jamun and Jalebi as a new category. 2. Identify the opportunity area and provide a Yes/No decision with reasons for the same.
2	Metrics/RCA;Product Strategy;	1. Define success metrics for Booking.com 2. Imagine you are a PM at Booking.com and the number of bookings are down by 20%, identify the reason for the same 3. What solutions can you give to improve the ratings for properties
3	Abstract;	In person interview mainly on previous work ex, why Navi, why Product, situation based questions on what would you do in such a scenario

Overall feedback: Basic Product Prep, Read about FinTech industry and the company, try to showcase that you are fine with working in a high pressure environment

Role: Product manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");	Design a product to improve the experience of blind people in an amusement park. Be clear and go deep on the problems of blind people
2	Metrics/RCA;	How do you track the performance of Airbnb app - Was expecting an answer on making customers travel more in a quarter. So it's important to know the vision of large companies. I was not aware of this and go wrong in the metrics question.

Overall feedback: Navi is interested in people who are good with numbers and have good product sense. Try to use lot of apps and understand their business goal and the relevant NSM.

Role: Product

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Product Strategy;Resume/Behavioural/WorkEx;	Amazon has developed a teleportation machine, how could they best use it?

2	Resume/Behavioural/WorkEx;Product Design ("Design x for y");	Create a sports app for Tier 2, 3 cities
3	Resume/Behavioural/WorkEx;	How do you perceive the functioning of the product vertical in Navi? Why Navi?

Overall feedback: In retrospect, they expected radical candour more than generic and superficial answers throughout the interview process (for the Resume/Behavioural/WorkEx section)

Role: Associate Manager, Analytics

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Metrics/RCA;	Was asked to Guesstimate the number of Uber rides in Hyderabad and was later asked to do an RCA on the same. RCA- You saw a drop in the number of rides booked during prime time. Do an RCA and come up with possible solutions Approach: Established what is prime time, what kind of activities happen during prime time, any new entrants into the market, any changes made to the platform post which this drop was seen, etc.

2	Metrics/RCA;	You are a Data Analyst at Swiggy and you saw that the number of first time users coming back onto the platform is down to 30%. Do an RCA First Time Users: You spent money and acquired 10 users and only 3 of them come back to the platform and spend money again. Approach: Standard RCA framework used.
3	Resume/Behavioural/WorkEx;	Grilled through my resume and was asked why analytics, why navi, short term and long term goals, Day in my life on campus looks like, etc. Approach: Kept it real and conversational, doing some research on the company, its recent activities gave me an edge to keep the conversation deep and engaged.
4	Resume/Behavioural/WorkEx;	Was asked to write SQL queries. I was given four tables and constraints for each and was asked to come up with a query. Was later asked to come up with a business problem for the query written, target audience Approach: I worked with SQL before but what essentially was being judged was the approach towards the problem and not the syntax.

Role: Product

Job Offered: No

Overall feedback: Throughout, I was not asked core product questions that could use frameworks but other candidates were. So while you prepare for product in gen, practise

some puzzles as well. Study system architecture a bit (try gaurav sen beginner series). All the best! Prepare your resume well and stories around best projects. If you reach the last round, expect a lot of behavioural questions

Nykaa

Role: Retention Marketing

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Abstract;	Questions revolved around retention pointers on my resume. I answered using the STAR framework. Gave them context of each situation followed by my hypothesis and how I solved the issue
2	Abstract;	2-3 questions revolving around retention strategies applied in my previous work experience. Question 4: if you were the retention manager of Nykaa. How would you segment the audience? Question 5: You need to increase engagement of existing users to increase pink Friday sales. What strategies will you use?

Overall feedback: Be thorough with all the resume pointers mentioned. Understand how to use marketing automation tools like clevertap, moengage etc. to increase engagement and retention

—

Ola

Role: Program manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;	The company's CHRO interviewed me and asked behavioural questions. I was short listed for founders office role initially.
2	Product Strategy;	I was asked the following strategy question..if a coffee shop owner comes to you and say that he wants to expand his business , how would you approach '.. I used my consulting prep knowledge to approach this question and it went well.
3	Resume/Behavioural/WorkEx;	Mostly about my work experience and what was then most challenging thing I faced at work?Why do I think I'm a fit to this role?

Overall feedback: Understand the company and prep well to answer all the things u write on resume. Try to link ur work with the things at ola. If its founders office or prog manager role be ready to answer strategy kind of questions aswell

Paytm

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
-------	-------------------	------------------------

1		Started with intro. Deep dive into case submission. Questions asked around why did I choose a particular category and the customer segmentation. The thought process behind solutions. Discussion on the case metrics and GTM. Also asked what improvements could be done in the case. He had already gone through my case and his focus was on understanding my thought process behind the solutions.
2		Started with favourite product- 3 things I like and 3 things I do not like. Spoke about myntra. Next was given a product strategy question around myntra's return fee. Why they introduced it. Discussed about how at times people use products and then return and the order value being less than the return value. Further questioned on how can we identify people who have genuine returns on myntra vs people who return used products/too frequent returns. Cross questioning on my points. Then was asked to design a feature to identify this difference. Lastly was asked my understanding of API and how the api works for the paytm feature I use the most. Explained API using the movie booking feature.

Overall feedback: Be thorough with your case submission. Practice all kinds of product questions. Portray yourself as someone who is ready to work in fast paced environments.

Paytm Contd

Role: Product Manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Metrics/RCA;Resume/Behavioural/WorkEx;	Started off with resume and some behavioural Asked me to speak about some feature I had worked on (mentioned on resume or otherwise). Asked to explain how I went about problem discovery, solution hypothesis etc and wanted to understand north star metric. Asked me to explain north star metric rationale and 5 other metrics I would want to monitor as well
2	Product Design ("Design x for y");Resume/Behavioural/WorkEx;	Asked Resume/Behavioural/WorkEx Asked me my favourite product. Then 2nd fav product, then 3rd. Asked me questions on my 3rd fav product - 2 features I like - 2 features I don't like - 1 improvement

Overall feedback: They do have some emphasis on metrics internally

Paytm contd

Role: APM

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Metrics/RCA;Product Design ("Design x for y");Go To Market ("How will you launch X");Resume/Behavioural/WorkEx ;	Explain the case - questions about specific things in case. Research done? Understanding of product and customer journey? (wanted the funnel situation for explanation) Why choose this particular segment? Checked understanding of CTR, impressions, conversion, abandonment. Main Q: "As a PM who interfaces between engineers and customers, how would you decide what features to build?" Best answer would have been low hanging fruits - RICE - best reward/effort ratio sort of an answer. Behavioral: Why PayTM?
2	Product Design ("Design x for y");Metrics/RCA;	Design a washing machine for blind people. I know you guys are good with your frameworks. Just talk about the target customers, customer journey with current products and anticipated pain points." Asked some basic clarification questions - Who are we? Resources at hand? Aim? Samsung's CSR initiative sort of. So now target completely blind people (if they can use it so can anyone else). Walked through current process of washing clothes from a blind person's perspective as much as I knew. Then asked about metrics - since altruistic

		purposes - Number of clothes washed by blind people.
--	--	--

Overall feedback: Be comfortable with breaking the frameworks. Research a lot about the org and current projects to be able to hold conversation. Do good numberwork in case submission - it will be scrutinized.

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Strategy;Product Design ("Design x for y");	30 minutes - Round 1 was essentially presentation of the pre-assessment case submission for all shortlisted candidates, where interviewers assessed the assumptions, chain of thoughts, width and depth of analysis and quality of solutions, and cross-questioned on the same during the presentation. The interviewer was satisfied with my assessment and breakdown of issues and prioritization of solutions.

2	Product Strategy;Resume/Behavioural/WorkEx;	30 minutes - It started with the favourite product question asking explicitly 3 favourite features, 3 features I don't like, and 3 improvements I would suggest. Brainstorming and discussion took 20 mins of this call. Last 10 minutes were behavioural - why I want to pursue PM as a pathway and what I think it offers that can benefit my long term goals. The interviewer only affirmed to anything I said throughout the call, no objections or cross questions. It was hard to read what she thought of the interview.
---	---	---

Overall feedback: Explore the app as a user and think of competitors for all features - which other businesses offer these solutions, how do costs of using the feature compare between these businesses, what complementary features exist that make life easier for users and complete the whole cycle. This on top of the basic product improvement questions should sail your ship.

Pine Labs

Role: PM

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Abstract;	They asked me to rate myself on 5 parameters (user story, SQL etc). Then asked questions around that such as what are non-functional requirements, optimisation through SQL etc

Overall feedback: There was only one interview conducted which was about 20 mins long.

Role: PM - Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;Metrics/RCA;Product Design ("Design x for y");	1) What is a user story, write a user story 2) What are NFRs, give examples of most important ones wrt payment platforms

2	Product Design ("Design x for y");Metrics/RCA;Go To Market ("How will you launch X");	You have 1 million dollars and 12 months runway, and you have to design a offline payment device for small to medium merchants in India. How will you do it. Mention metrics to track as well.
---	---	--

Providence

Role: Sr. Program Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");Product Strategy;Go To Market ("How will you launch X");	(1) Design an app to find hospital beds in an emergency - Used CIRCLES framework - Explained functional and non functional (high availability, robust, scalability) requirements - metrics (2) Questions around market research and feasibility analysis for a product (3) Questions around JIRA and project management - details about JIRA jargons (4) Questions around AGILE (5) Prioritise features - what framework would you use (6) How would you manage budget for this app (generic not very detail)

2	Product Design ("Design x for y");Metrics/RCA ;	(1) Introduce yourself (2) Healthcare industry and interests? (3) Why PM and why healthcare (4) Design an announcement system for a hospital - Used CIRCLES framework - the discussion was an hour long. Functional and non functional requirements were asked, I answered everything thinking its a hardware product but a mobile app for the hospital staff is an interesting angle. In circles- segment properly, show your knowledge about healthcare industry, challenges etc (5) Metrics for this
3	Abstract;	HR

Razorpay

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design	Design an e-commerce app for blind people A: clarifying questions around objective, business. Classified users on the basis of level of blindness, built out pain points and features and defined success metrics and finally a GTM strategy
2	Guesstimate; Product Strategy; Abstract	Q1: Estimate the number of Uber rides in Bangalore

		Q2: Uber trying to hold up market share against BluSmart (zeroed in on revenue losses; Revenue = ARP ride * #rides and so on)
3	Abstract	Q: Improve delivery efficiency for Swiggy A: Started off with identifying metrics that defined delivery efficiency and broke down the problem and tried to minimise restaurant lead time and maximise orders/rider)

Overall feedback: Do the usual product prep (design, RCA, metrics, GTM) Be strong with metrics and get started with a metrics-first approach.

Role: Product Manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Product Design	Design a solution for improving csat of people at an amusement park. Designed a user journey first and validated with the interviewer. Prioritized a target persona from a list. Before solutioning I aligned the metric I want to optimize for and decided on two - wait time, and rating. Proceeded with solutioning using standard design framework. RZP is very particular about metrics so pay close and serious attention to your metrics game. Be very thorough and detailed in your approach so you can defend it at any point.
2	Guesstimat ; Product	It was a fairly long interview around market entry. Should google develop a Netflix competitor. It was a long and discussion oriented interview and no framework would help - we discussed moats of google v netflix, how youtube

	Strategy; Abstract	angle would play out if google went into long-form media content generation, barriers to entry and guesstimates on potential market size before deciding go/no-go. After that it became about operationalizing it - distribution and creation of media, revenue generation (subscription models), etc. The interviewer acted like a sound-board and helped me brainstorm as I went through solving the problem, offering new perspectives and challenging me whenever I suggested an option. It's very important to take the right cues but also balance it with your conviction of why your plan is better instead.
3	Product Design; Product Strategy	How would you solve for Whatsapp spams? This was with a group PM so I expected a strategy question. I went with defining the problem first - what is spam, what would I be counting as spam in this problem. Differentiated between Whatsapp business/consumer to select consumer segment because intensity of pain points. Went through solving the rest of the problem through standard frameworks. In hindsight, because this was the final round and I didn't get in. There were a couple of things that I did wrong - didn't validate my assumptions with the interviewer before going forward, got too focused on the solution early on and didn't spend enough time in the problem space.

Overall feedback: Metrics first always. In any given question, focus at least 40% of your time on the problem space and proceed with solution only once you have defined everything there is to.

Searce

Role: Associate Project Manager - Client Engagement

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;	General behaviour/work ex round to understand my background, understand what roles I would be a best fit for, and why I want this job I spoke about how the work the company does is very similar to my previous job (software engineer - data science), about how this is the career trajectory I wanted, and about the specializations I have taken at ISB to align with my career goals (strategy and IT)
2	Resume/Behavioural/WorkEx;	More details about my previous work experience, why I did an MBA, deep dive into my resume I spoke about the various aspects of my previous job, the tech that I worked with, my role as a face to clients, the kind of projects that I worked on, and how that could translate into my role at Searce
3	Resume/Behavioural/WorkEx;	Purely behavioural session with CEO, answered questions like biggest fear, strengths/weaknesses, what others think of me, etc.

Overall feedback: know your resume inside and out, have a solid, impenetrable reason for wanting to work at Searce, have a decent understanding about data science and the tech/tools used for the same

Sirion Labs

Role: APM

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Abstract;	Detailed discussion on PR and the discussion revolved around GPT, LLMs etc
2	Product Design ("Design x for y");	Favourite product : Used fav product framework, explained google photos and improvements in google photos

Role: APM

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkE x;	Started with basic template questions on resume and behaviours. Moved on to the explanation of the submission Questions on the submission Other behavioural questions (grilled a little bit on my background and why I had switched so many times before)

2	Product Design ("Design x for y");Metrics/RCA;	This round tested almost concept. It was taken by the co-founder and the VP of Product. 1. Favourite product - I had prepped for Canva really well and I sold it well too. They liked the answer. 2. Improvement - They asked me what would I improve on Canva. I had not prepared for this question but I did pretty well by incorporating some ideas from my experience with Canva. 3. Monetisation - How will you improve monetisation? I suggested some new ways. 4. Metrics - What key metrics would Canva be most interested in? These questions are really important because the interviewers want to see if your technical skills are backed by business acumen - something that is essential to the PM job. Prepare these questions well. My approach with these questions is to use Lenny's blog: The Growth Model at Duolingo as a template. 5. How would you measure work done by developers? How would you plan ahead with your developers before starting work on a new feature? The interview went for an hour and they were very accommodative. The interviewers will sometimes try to test you but it is important that you maintain your cool.
---	--	--

Role: Product Manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;	Explain the deck, asked me about Gen AI and about AI in general.

Overall feedback: Lots of research, try to understand their product by looking it up on Youtube and try to see the use cases

—

Role: Product Manager

Job Offered: No

Overall feedback: They released the case 2 days before O1, when you are busy with pre-assessments. Try to understand the company's business and market beforehand since the shortlists were released a few days before that

Target

Role: Assistant Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;Product Design ("Design x for y");	It was a very conversational interview. Most of the questions were around work experience. Situation based behavioural questions were asked for example dealing with developers in your team etc. Given my work ex on personalisation and the job role somewhere around the same, I was asked applications of personalisation too.

Overall feedback: Be thorough with your resume. Practice behavioural questions. You can lead the conversation in the direction you want.

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;	Have you had to deal with the competing requirements of multiple stakeholders? How did you decide whose requirements should be prioritized? How did you handle tough/rude

		stakeholders? Be honest, be jovial
2	Product Strategy;	You need to use some delivery services to ship some packages your companies deal with. You need to ship about million packages in a month. You have 3 options for delivery services - \$5, \$7 and \$9 per package wherein the \$5 service is the least reliable and \$9 is the most reliable, you have a finite budget. The goal is that you need be within budget, not let it impact delivery experience and achieve a 95% success rate keeping the deliveries fast (some of the above data points were figured after asking clarifying questions) Some questions I asked - 'Reliable' delivery in what sense? - Time, safety of packages (if they're fragile) etc - Type of package - Type of customer - Type of demand Then got into - Competitors - Synergies - Alternatives etc (6C's) Interviewer then tried to nudge me to try to find other ways (maybe in the value chain) that we can work with to be able to reduce the cost incurred because he wanted me to use the most reliable delivery service (\$9) itself.

		Then went on to go through the Retail value chain (can be found in any consulting case book) Essentially ----> Sourcing - Inbound Logistics - Inventory - S&M - Outbound Logistics He told me pick one and go deeper into it and try to find ways to reduce cost
--	--	--

Overall feedback: Good to have some understanding about the retail industry

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");Abstract;	Product Design Question: Design a B2B SaaS platform (edtech platform) for teachers, to manage their content (homework, classwork, their own content), also consider various stakeholders involved in the education business. Answer: Used CIRCLES to start with first comprehending the ques, comparing it with existing solutions such as smart class and better understanding the goal the recruiter had in mind, identified stakeholders such as teachers, child, parents of the child and also school authority. Moved on to segment the teachers as the primary users among Primary, Secondary and Highschool teachers (case was restricted to K12 teachers). Chose Highschool teachers as the target segment sighting their pivotal role in shaping the careers of kids and also their role as a counsellor for kids in their growing years. Interviewer kept on giving feedback and was happy with the approach, then we moved on to pain points and solutions. Solutions were based on a two-profile based platform that allowed profile creation separately for each student and for each teacher, there were options to create classes (similar to Google Classroom) Included aspects of personalisation, of making content based on the level of understanding for each student. Also included counselling hours that a student could book with any teacher by

		checking their availability. Then provided metrics. Was grilled heavily on these, recruiter wanted to see two kinds of metrics, quality (feedback and surveys mostly) based, and quantity based.
2	Abstract;Product Strategy;	Questions were mostly based on my resume and how do PMs act in certain situations. The recruiter was trying to make sense of how my previous work as a PM aligns with what they would do in their organisation, there was heavy focus on stakeholder management and what I learnt as a PM in my previous role. Was asked what were the challenges I faced in my work and how I navigated through them
3	Product Strategy;Abstract ;	Similar to round 2, but more focused on my personality as well. Questions like what makes me happy, or what makes me sad at work were asked. Questions seemed a bit abstract but the recruiter was picking on everything I said and was asking follow up questions on everything. More questions related to stakeholder management were asked.

Tesco

Role: Associate Product Manager. Job Offered: No

Round	Type of Questions	Questions and Approach
-------	-------------------	------------------------

1	Metrics/RCA;Resume/ Behavioural/WorkEx;	RCA - Working for a rapid grocery delivery company (assume Swiggy Instamart) and you see that in the last 3 months - "Not getting all the Items I ordered" issues have gone. Figure out what the issue is Listed relevant components that came to mind at that time: Dark stores, Delivery personnel, Handlers and Packers, Consumer facing app, Backend system (at the dark store, etc Asked other scoping qs Was asked to then choose any of the following as a possible point of issue Supply side issue, tech issue (consumer facing app or backend) or issue at the dark store ---- Role play between interviewee (a PM) and the interviewee (who was an Engineer/Engineering Manager) Situation - The interviewee has come back to you saying there's something in a project that they think you should work on/fill out. How do you convince the interviewee this comes under their purview and convince them to do it instead? Tip - Don't try to scam them into doing the work, reason with them and try to identify legitimate reasons why you think they should be doing this work and not you. It's totally okay to ask clarifying questions to better understand the situation.
---	--	---

ThoughtSpot

Role: Product Manager

Overall feedback: Experience varied a lot among candidates. In gen, when I prepared I noticed that they stress a lot on product strat questions and mention B2B PM V/s B2C PM in interviews as well as pre-plac talks. Typical PM questions only but prepare strategy and guesstimates for sure. They take common companies only - Swiggy, zomato, amazon, urbanclap etc. When you prepare for prod in gen, prepare ideas and all for these household product companies

Role: PM

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");	Question: You are the owner of a popular restaurant chain in Bangalore. You want to revamp the customer dining experience at your flagship branch by designing touch-screen devices for each table. How will you go about this problem? What features will you include/not include? Answer: I tried my best to follow the frameworks but made some critical errors early on by not thinking of the entire customer journey at a restaurant. This led me to pick up smaller issues as pain points and solve them. The interviewer noticed that I was not confident in my answers, and she ensured I was thoroughly justifying all my features. Tips: Following the case framework is beneficial for

		practice, but try to apply the frameworks with some sanity checks.
--	--	--

Overall feedback: Try to create a different 'About Me' section for each company that you interview at. You should clearly articulate why your life story connects with what the company is doing so that you stand out from the crowd. Remember that everyone else around you is following the same prep as you -- so your behavioural questions make more of a difference

Role: Associate Product Manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");	Imagine you are the PM of a very cutting-edge tech company. Design any device to assist the visually impaired. Clarified scope to be very broad - anything from a smart cane to sonar bands. Then scoped the company to be Samsung. Came up with an entertainment-oriented navigation pin for partially blind and colour blind people. Round went for 30 minutes.
2	Product Design ("Design x for y");Product Strategy;	Create an innovative ceiling fan for home usage The interviewer wanted really crazy answers to test creative thinking and response under pressure. He kept pushing for more and more out of the box thinking. An urban company-like firm has not done well in India revenue-wise, what is the reason for it? Mentioned disintermediation and razor-thin margins. Suggested they diversify into sale of beauty and grooming products.

		Round went for 40 minutes.
--	--	----------------------------

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");Product Strategy;	1. Design Youtube for Kids 2. Give new monetization strategies for Netflix
2	Product Strategy;Product Design ("Design x for y");	1. Urban company is facing a decline in their topline since last 6 months, figure out reason for the same 2. Give growth strategies for increasing topline of the business 3. Design a unique ceiling fan
3	Abstract;	Favourite product, previous work ex, why PM, why thoughtspot, my exposure to analytics,
4	Abstract;	previous work ex, why PM, why thoughtspo

Role: Product manager

Job Offered: No

Round	Type of Questions	Questions and Approach
-------	-------------------	------------------------

1	Product Design ("Design x for y");	Design a product for blind person in home incase there is fire
2	Product Strategy;	Define the monetization strategy for smart table in a 5 star restaurant - I choose not to bring in social media in the dining table since the goal was to bring families closer during dinner/lunch. However the interviewer wanted to use social media.

Overall feedback: Thoughtspot is a well structured product company where interviews were held on time. They had good questions. Focus more on design questions - have a structure set in place. They prefer both business and tech folks for PM role/

—

Role: Product Manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");	Design a driverless electric vehicle and safety system for the vehicle (Location - India) Was interviewed by VP, Product - she had 15+ years of experience - so was extremely focussed on fundamental thinking - is it even the right time to build a driverless vehicle in India? - are the roads in India even conducive for driverless cars in India? - do you want to build retail vehicle or commercial vehicle? Note - Low probability of being interviewed by a decision

		maker. Most of the other applicants were interviewed by incumbent product managers
2	Metrics/RCA;	You're a D2C fashion ecommerce brand. You can ask your CFO for only 1 metric a month to figure out - is your business doing well or not? What should this metric be?

Overall feedback: 1. focus on fundamental thinking / dhandha mentality over & above the frameworks we learn

2. cultural fitment - they will check for humility, your career goals & if thoughtspot is the right place for your career growth

3. key questions to prepare - design & product improvement

TVS motors

Role: Senior Manager - Lead Digital Owner

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;	After the pre-assessment, TVS shortlisted 12 people and directly had a HR + Product interview. Make sure you know your resume inside out and can explain the why behind things.

Overall feedback: Research the company, what they are doing, and their plans. Since the role was for the integration of AI in TVS dealership software, I went to a TVS motors dealership and asked them to show me the product they were using. This way I learned more about the company and had an idea of what product I would be working on. I also mentioned this in the interview, and they asked me what would improve in the current dealership process of TVS motors.

Vassar Labs

Role: PM

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Abstract;	What do you understand about user journey? How will you assess/metrics to assess PM's performance? What is the role of PM? Is there any course that I may have taken in MBA?
2	Abstract;	How do you prioritise the features? Most important KPIs for PM? What do you understand about the low hanging fruits? Something regarding product development (don't remember)

Overall feedback: Last 2 rounds scheduled but not attended.

Walmart

Role: Associate Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Metrics/RCA;Product Strategy;Go To Market ("How will you launch X");	The team recruiting APMs were from the supply chain org so most questions were centered around that. This interview was a sequence of RCA, product analytics, strategy one after another. His only statement in the beginning was - "There is an issue with the inventory movement of your store, how would you solve this problem as the store manager". He basically wanted to test whether I could structure a seemingly vague statement thrown at me, kept making up more questions to throw me off. After the routine RCA questions to understand the details of the store, I zeroed in on a few possible causes - outdated transaction systems lacking demand forecasting capabilities, competitor chains, incorrect shelf space allocation etc. He picked the last one and asked me to choose 2 metrics to optimise. I chose optimal order quantity from a stock out/wastage of perishable goods perspective. From a revenue perspective chose net profit per square feet of shelf space. We then discussed strategic improvements and how I would convince stakeholders of the validity of my strategies.

		This went on for 40 minutes. The second set of questions were about formulating an equation for omnichannel demand forecasting. Once I came up with a skeletal structure of the demand, he went on to ask RCA questions around each input variable. Went on for 20 minutes.
2	Resume/Behavioural/WorkEx;	This round covered resume in detail, a relevant e commerce case competition in depth and behavioural questions. Towards the end he was mostly answering my questions about the team's work culture and trying to understand how well I would fit in.

Overall feedback: Overall, round 1 was metrics and analytics heavy. I used a lot of the theory concepts from the course LSCMA to answer the questions. But again this was very specific to the team that came to recruit. Be sure to practice behavioral questions with someone who has taken real behavioral interviews in your batch, it honestly makes a world of difference.

Role: Associate Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;	Purely based on past work ex and CV. I was asked to clearly articulate one of the projects that I had led in my previous organization

2	Product Strategy;	Not purely a product strategy question. It was more related to how I would go about with the pricing of a couple of products. The interviewer had shared an excel sheet with data and I was expected come up with an approach to price the product.
---	-------------------	---

Overall feedback: Be prepared with everything mentioned on your CV. Structured thinking and clear articulation is a must. Know about what Walmart does.

Winzo

Role: Product + Growth + Strategy

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Resume/Behavioural/WorkEx;	Horrible interviewer. The interview happened on a phone call at 10:45 pm. 20 minutes rounds where the only question was around my introduction and what I have observed on the app. On the basis of my observation he picked up one point and asked the rationale for some product changes on their app recently. Being confident probably was the key, IDK. 11 people qualified from an initial 28.

2	Metrics/RCA;Resume/Behavioural/WorkEx;	Another badly conducted telephonic round. The interviewers phone kept getting disconnected. The round was more on about my work and how that ties up at the level of Winzo. Then there was an RCA question on how Ludo has been launched as a new game but the D5 and D7 retention for it is lesser than their average. The solution was around the nature of the game being 4 player instead of 2 players and hence the players not getting enough wins to keep them motivated.
3	Resume/Behavioural/WorkEx;	Founder round. Fun casual conversation. Asked me about one of my superpower, where I mentioned observation. Asked me what I observed in Winzo's app. I mentioned the placement of Ludo on their bottom nav drawer to which I was asked why is that. I had read up about how they are trying to sell Ludo in the international as well as domestic market. Then asked we had some discussions around the new litigation changes for online gaming GST rules.

Overall feedback: Not a very good interview experience. Very unprofessional behaviour by the first two interviewers. The founder call was well conducted.

Zynga

Role: Product Manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Metrics/RCA;	The revenue of your favorite gaming app has declined by 20%. Figure out why

Role: PM 1

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Metrics/RCA;	The Revenue for Harry Potter(case submitted on the same) has gone down by 20% in a week, conduct RCA and suggest remedies. Broke down revenue into metrics further till L4 metrics and then applied the external/internal approach. It would have been better to stick to the metrics and not ask for external issues so late into analysis-usually external is not the cause. Internally should have gone deeper with more nuanced questions and asked industry specific metrics. For ex- can also break by AARM framework customised to the industry in question, user-journey break down also works when metrics till L4 analysis has been exhausted.

Overall feedback: For clearing the case pre-assessment, follow the CIRCLES approach with GTM(can look at previous submissions)

For PI, the rounds will be split across RCA, Metrics, Design/Improve and Game related insights. So be very sharp on Metrics-that is extremely important for Zynga.

Role: Product Manager

Job Offered: Yes

Round	Type of Questions	Questions and Approach
1	Product Design ("Design x for y");Metrics/RCA;Resume/Behavioural/WorkEx;	Round 1 - Senior Product Manager Tell me how would your Day look like at Cashify? > At Cashify, the interviewer seemed interested in understanding how I would approach the role of a Product Manager, considering my prior product experience. They inquired about how I would manage stakeholders, identify, and solve problems within the company. The usage of Facebook Messenger is dropping? Find the root cause. > Zynga places a strong emphasis on metrics, as the interviewer aimed to assess my ability to deconstruct metrics and envision various use cases.

2	Product Design ("Design x for y");Resume/Behavioural/WorkEx;	Give a jist of your work at Cashify. Design a reverse logistics app for a marketplace like Amazon and Flipkart. > I used my learnings from my previous experience to answer this question. The interviewer questioned me on every feature and if I understood the final impact of the feature. I had made my own framework to answer design questions with a few tweaks to the CIRCLES method.
3	Resume/Behavioural/WorkEx;Product Design ("Design x for y");	Why Zynga? Why Gaming? What would your colleagues say about you? How do you handle conflicts? Favourite Gaming App. > I answered LudoKing as my favourite gaming app. Since Zynga was my dream company I had prepared extensively for gaming related questions to show my inclination. Hooked model really helped me understand the psyche behind game mechanics. Redesign Ludo to increase DAU by 2X on D1? > I had prepared to improve LudoKing before my interview. Make sure you show your inclination towards gaming. Generic PM prep won't help for Zynga. I would recommend spending a few days to understand what the company does and speak to Alums from that company.

Overall feedback: Attend the Pre-Placement talk and sessions held by CAS. You will understand what is it that they put emphasis on during interview rounds. Be thorough with your PM prep as similar types of questions repeat year on year.

Role: Product Manager

Job Offered: No

Round	Type of Questions	Questions and Approach
1	Metrics/RCA;	Based on the Zynga case solved(I gave the case on Zynga's Harry Potter App), conduct an RCA- "The revenue of the app decreased by 20%". Approach- I did an analysis on 1)whether the dip was gradual/sudden,2)clarified the possibility of external factors influencing this dip and 3) for internal factors went into an L1,L2,L3,L4 metric breakdown approach to come to the final solution. This involved for ex, breaking down revenue into ARPU x No. of users. For users I further segmented into new and old users and accordingly kept asking metrics driven questions at each stage.

Overall feedback: Be focused on RCA and metrics, that will go a long way in converting the initial rounds. For the case, make sure to follow a structured approach, can go through previous decks, decks on PM school and other resources. Again, in the deck, ensure you show your analytical acumen via excel workings and state assumptions clearly.

Role: Product Manager 1

Job Offered: Yes

Round	Type of Questions	Questions and Approach

1	RCA	You enter the office and revenues of your fav game fell by 10%. How will you find the issue? It is a typical RCA question. Start with clarifying questions. Don't forget to check on revenue sources (Ads or AIP) and check if revenue is falling because of DAU, conversion problem, ARPU or retention problem. Start with external factors (competition, substitutes, piracy, purchasing power, news etc). Then move to internal factors and make a user journey. Always ask questions in terms of metrics. In my case, the problem was payment failures on google play store.
2	Product Design ("Design x for y")	What game do you play offline and how would you design an app for the same? I chose Badminton. He gave further instructions that it should be short 10 mins matches and P2P matches. I started with user personas - plays for fun, competition, social interaction or learning and prioritized fun and social interaction. Gave pain points (GPT for common pain points for gaming in advance) and moved to solutions like fb integration to find players, special courts and racquets, player profiles to challenge and rise up leaderboards, player generated content etc. Post this he asked me how will I monetise this - I talked about ads (static and rewarded ads and how will I increase time spent) and in-app purchases (coins to get some advantages like challenges, tournaments, tips). He then asked me success metrics, guardrail and kill metrics. A lot of my interviewers were very interested in LTV as an answer. Then he asked me how I determine the coins to be awarded for an ad they see. The answer I gave was revenue I earn via ads

		(CPC*impressions) and revenue from selling those coins + make sure the coins you give have enough value to carry out actions. A couple of more follow-up questions but a very chill interviewer. Only advice is to take a pause, think, structure and then speak.
3	Behavioural	Asked behavioral questions around why product, your best project so far, how do you handle conflicts, how would you put your points forward to a person who is 8 years senior to you and do not align with your working style. It was a very conversational interview. The interviewer was head of product and talked a lot about zynga work culture and growth trajectory.

Overall feedback: Zynga sends a prep doc 24 hours before the interview and mostly focus on RCA around revenue drops and design feature questions. Refer handbooks and online questions and you'll start seeing the patterns of what kind of questions they ask. Play a couple of games before interviews to get a sense of the gaming ecosystem, in-app purchase types and what strategies are used in this industry. Work a lot of metrics and always break down the problem in Zynga interviews. It will not be a stressful interview, make it as conversational and be creative as questions are not tough but it depends if you can bring new perspectives and ideas to the table. Prepare your favorite games etc. Also, watch all pre-placement talk and sessions organized by Zynga AGMs.

QUESTION BANK

The following are some sample questions that you can practice in groups. We have not given out solutions for these - the objective being that you should use this as a way to brainstorm ideas, approaches, frameworks, etc with your friends and case groups. You can also use ChatGPT to brainstorm with and come up with good structures for each of them. Moreover, we encourage you to use ChatGPT liberally to help you come up with new questions as well.

PRODUCT DESIGN

You can create several practice questions by **creating permutations and combinations** of the following products and personas. Feel free to come up with your own!

Products	Personas
Fridge	Elderly
Alarm Clock	Children
Microwave	Young working professionals
Vending Machine	Tier 3 town dwellers
Mobile Phone	College students
Uber	Teenagers
Smart Watch	Stay at home moms
Dating App	Product Managers
Fitness App	Management Consultants
Gardening App	MBA students
Online banking App	Freelancers
Language Learning App	Tourists/travel enthusiasts
Productivity App	Visually impaired persons

PRODUCT STRATEGY/GTM

Type 1: Should <Product> go into <Space> ? If so, how will it do so?

You can create **permutations and combinations** from the following table

Products	Spaces
Netflix	Dating
Uber	Self driving cars
Google	Gaming
Amazon	Productivity Suite
Facebook	Travel
Twitter/X	Video calling
Swiggy	Groceries

RCA

1. Revenue of Farmville App has decreased. Why?
2. Engagement on Youtube has decreased. Why?
3. Number of orders on Amazon has decreased. Why?
4. Ratings of Uber has decreased. Why?

You can use revenue/engagement/growth/ratings/retention as the metric that has fallen and create unlimited questions using products that most people use, such as google, uber, myntra, swiggy, etc etc.

METRICS

What would be the success metrics for the following. You may also use these questions as product strategy/GTM questions.

1. Launching Youtube Shorts
2. Launching 2 Wheeler rides on Ola
3. Launching Memories feature on Google Photos

4. Deciding between launching Facebook Threads as a new App vs. on the Facebook or Instagram App
5. Integrating ChatGPT in iPhone OS
6. Launching virtual try-on on Myntra
7. Launching 10 minute delivery on Zomato
8. Launching a live stream feature on LinkedIn
9. Launching AI workouts on Cult App
10. Launching dating feature on Instagram
